Optical Waveguide Coupling Structures for Integration in Commercial CMOS Aaditya B. Khimani, 2004

Optical Communications from a Fourier Perspective Palle Jeppesen, Bjarne Tromborg, 2023-11-17

Optical Communications from a Fourier Perspective Fourier Theory and Optical Fiber Devices and Systems covers a broad range of subjects spanning Fourier theory and signal analysis over photonic components including time lenses in optical communication. Some of the theory is more generally applicable beyond optical communication and is of relevance also for communications engineering. The Fourier theory dimension of the book presents the relationship between Fourier series and Fourier integrals and also the related Laplace transform. The book covers wave propagation in optical waveguides based on Maxwell equations and the nonlinear Schrödinger equation. Various modulation formats are addressed along with coherent detection and required bandwidth. Optical Fourier transform in the form of time lens is covered for example in modulation format conversion and spectrum magnification and couplers and their use for optical discrete Fourier transformation are also discussed. Other important subjects such as noise linewidth and coherence are discussed in relation to semiconductor lasers. Detailed derivations and a deeper background for the chapters are provided in appendices where appropriate. Introduces Fourier theory and signal analysis tailored to applications in optical communications devices and systems. Provides a strong theoretical background and a ready resource for researchers and advanced students in optical communication and optical signal processing. Starts from basic theory and then develops descriptions of useful applications.

Photonic Crystals Igor A. Sukhoivanov, Igor V. Guryev, 2009-09-21

The great interest in photonic crystals and their applications in the last 15 years is being expressed in the publishing of a large number of monographs collections textbooks and tutorials where existing knowledge concerning operation principles of photonic crystal devices and microstructured fibers their mathematical description well known and novel applications of such technologies in photonics and optical communications are presented. They challenges

authors of new books to cover the gaps still existing in the literature and highlight and popularize of already known material in a new and original manner. Authorsofthisbookbelievethatthenextstep towards wide application of photonic crystals is the solution of many practical problems of design and fabrication of the specific photonic crystal based devices aimed at the specific technical application. In order to make this step it is necessary to increase the number of practitioners who can solve such problems independently. The aim of this book is to extend the group of researchers, developers and students who could practically use the knowledge on the physics of photonic crystals together with the knowledge and skills of independent calculation of basic characteristics of photonic crystals and modeling of various elements of integrated circuits and optical communication systems created on the basis of photonic crystals. The book is intended for qualified readers, specialists in the field of optics and photonics, students of higher courses, master degree students and PhD students. As an introduction to the subject, the book contains the basics of wave optics and radiation propagation in simple guiding media such as planar waveguides and step index fibers.

Frontiers in Optics and Photonics Federico Capasso, Dennis Couwenberg, 2021-06-08. This book provides a cutting edge research overview on the latest developments in the field of Optics and Photonics. The past few years have seen an upsurge in the numbers of known Neolithic settlements in Ireland. Many of these sites have been excavated by archaeologists based in field units but few are well known to the wider

archaeological community The papers in this volume were presented at a conference held at Queen s University Belfast in 2001 which provided a forum for a discussion of the new Neolithic material from Ireland in its wider geographical context Although the bulk of the emerging Irish settlement evidence relates to substantial houses many of these papers consider wider themes including issues of contact and communication along the sea routes and coastal margins of north west Europe questions of diversity and regional patterns of sedentism and mobility and variations in regional food production strategies
