

Xavier University College of Nursing
NURS 364: Pathophysiology
Endocrine Disorders I

Endocrine System Review

-Endocrine System:

- Hypothalamus regulation
- Pituitary: "master gland"
- Other endocrine glands:
 - Thyroid gland
 - Parathyroid gland
 - Adrenal glands
- Other important organs that produce hormones: pancreas, gonads

- Hormone:** Chemical messengers that are transported by body fluids; produced by endocrine cells that exert their action on a specific target organ
- Regulation of Hormones:** Hormones are controlled by negative or positive feedback systems, along with hypothalamic-pituitary target cell feedback (pages 1042-1043)

Endocrine Disorders

- Hypofunction** *too little function (not enough hormone)*
 - congenital absence or impairment of gland
 - gland destruction by ischemia, inflammation, autoimmune disorders, or cancer
 - hormone receptor defects or impairment in cellular responses
 - production of inactive hormones or destruction of circulating hormones by antibodies
- Hyperfunction** *too much function*
 - excessive stimulation and hyperplasia
 - hormone producing tumor—such as in paraneoplastic syndromes
 - exogenous hormone administration

NOTE: **Hormone resistance** (the target organ is unresponsive to hormonal stimulation) can also result in endocrine disorders. We will see this mostly with type II diabetes mellitus.

-Classification of disorders:

- primary: originate in the gland responsible for producing the hormone
- secondary: target gland is normal, but the stimulating or releasing hormones from pituitary
- tertiary: problems is with the hypothalamus—so both pituitary and target gland function altered

Posterior Pituitary Hormone Disorders

-Antidiuretic Hormone (ADH) Disorders

- Remember ADH (or vasopressin) is synthesized in the hypothalamus and stored in the posterior pituitary
- ADH is released from the posterior pituitary in response to an increase in serum osmolality or decrease in blood volume

only works on water
