

NOTES ON GENETICS: GENETIC LINKAGE AND GENE MAPPING, CENTRAL MOLECULAR DOGMA OF GENETICS, GENE REGULATION

Only 2 to the 3 traits particularly body color and eye color and we will be getting the phenotypes:

Gray body, red eyes	1159	
Yellow body, white eyes	1017	
Gray body, white eyes	17	} Recombinant offspring
Yellow body, red eyes	12	
Total	2205	

Morgan concluded that due to crossing over, the homologous X chromosomes can exchange segments and create a new arrangement which we call as **RECOMBINANTS**.

Morgan's interpretation:

Explains the observed traits based on the experiment of Morgan

Double cross-over if there are 3 traits

RECOMBINANT OFFSPRING

Pairing of traits into body color-eye color and then eye color- wing size:

Gray body, red eyes	1159	
Yellow body, white eyes	1017	
Gray body, white eyes	17	} Recombinant offspring
Yellow body, red eyes	12	
Total	2205	

Red eyes, long wings	770	
White eyes, miniature wings	716	
Red eyes, miniature wings	401	} Recombinant offspring
White eyes, long wings	318	
Total	2205	

Eye color- in between genes.

- There is a substantial difference in the frequency of the two recombinants
 - 17 + 12 = 29 for body color-eye color (much less=nearer)

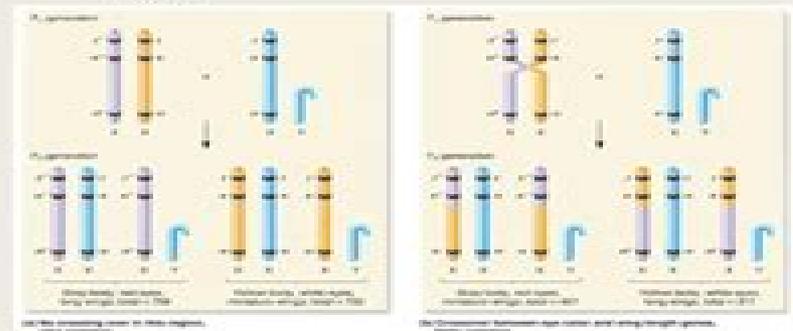

- 401 + 318 + 719 for eye color-wing size
- He proposed that the likelihood for cross-over is dependent on how far apart the two genes are from each other
- The longer the distance of the two genes, the more likely crossing-over to occur between them, hence, the greater frequency of their expression.
- The degree of crossing over, is directly proportional to the two genes; the farther apart, greater chance to cross-over

PARENTALS

- There would be no crossing over

SCO or Single Cross-over

- More numerous as further apart from each other

Double cross-over

- Cross-over between both genes, Y+ W, M+
- The more numerous is the parentals, the least would be the DCO, in between are the SCO (less frequency)

GENE MAPPING

- The recombination frequency is constant for any pair of linked loci and represents the "genetic" distance between them
- Each map unit (1 mu) is the distance that will generate 1% recombination equivalent
- A map unit is also known as **centimorgan** (1 cM) in honor of Thomas Hunt Morgan who pioneered the genetic linkage study

Genomics Research on Non-Model Plant Pathogens: Delivering Novel Insights into Rust Fungus Biology Sébastien Duplessis,Guus Bakkeren,David L Joly,2016-04-14 Fungi of the order Pucciniales cause rust diseases on many plants including important crops and trees widely used in Agriculture forestry and bioenergy programs these encompass gymnosperms and angiosperms monocots and dicots perennial and annual plant species These fungi are obligate biotrophs and except for a few cases cannot be cultivated outside their hosts in a laboratory For this reason standard functional and molecular genetic approaches to study these pathogens are very challenging and the means to study their biology i e how they infect develop and reproduce on plant hosts are rather limited even though they rank among the most devastating pathogens Among fungal plant pathogens rust fungi display the most complex lifecycles for

with up to five different spore forms and for many rust fungi alternate hosts on which sexual and clonal reproduction are achieved. The genomics revolution and particularly the application of new generation sequencing technologies have greatly changed the way we now address biological studies and has in particular accelerated and made feasible molecular studies on non model species such as rust fungi. The goal of this research topic is to gather articles that present recent advances in the understanding of rust fungus biology their complex lifecycles and obligate biotrophic interactions with their hosts through the means of genomics. This includes genome sequencing and or resequencing of isolates RNA Seq or large scale transcriptome analyses genome scale detailed annotation of gene families conformation of genes and or expression of gene complements via proteomics and comparative analyses among the various rust fungi and where feasible with other obligate biotrophs or fungi displaying distinct trophic modes. This Research Topic provides a great opportunity to provide an up to date account of rust fungus biology through the lens of genomics including state of the art technologies developed to achieve this knowledge.
