GENERAL CHEMISTRY

The Essential Concepts

The cover features several molecular models on a dark, textured background. In the center, a diatomic molecule is shown with two purple spheres connected by a light-colored rod. To its right, a green arrow curves upwards and to the right. In the bottom left, two purple spheres are shown with a bright green beam of light passing through them. Scattered throughout the background are various other molecular models, including diatomic molecules and larger, more complex structures, all rendered in shades of purple and pink.

General Chemistry 6th Edition Raymond Chang:

General Chemistry Raymond Chang, Jason Scott Overby, 2011 The sixth edition of General Chemistry continues the tradition of presenting only the material that is essential for a one year general chemistry course It strikes a balance between theory and application by incorporating real world examples helping students visualize the three dimensional atomic and molecular structures that are the basis of chemical activity and developing problem solving and critical thinking skills Although the sixth edition incorporates many impressive features such as macro to micro artwork animations correlated to the text and hand sketched worked examples General Chemistry is still 200 to 300 pages shorter and much less expensive than other two semester textbooks Dr Chang's concise but thorough approach will appeal to efficiency minded instructors and value conscious students

Human Chemistry (Volume Two) Libb Thims, 2007-09-01 Volume two begins with Goethe's theories of affinities i.e. the chemical reaction view of human life in 1809 This is followed by the history of how the thermodynamic 1876 and quantum 1905 revolutions modernized chemistry such that affinity the force of reaction is now viewed as a function of thermodynamic free energy reaction spontaneity and quantum valency bond stabilities The composition energetic state dynamics and evolution of the human chemical bond A B is the centerpiece of this process The human bond is what gives yields and takes absorbs energy in life The coupling of this bond energy driven by periodic inputs of solar photons thus triggering activation energies and entropies connected to the dynamical work of life is what quantifies the human reaction process This is followed by topics including mental crystallization template theory LGBT chemistry chemical potential Le Chatelier's principle Muller dispersion forces and human thermodynamics
