CGF AIRCRAFT CORPORATION MEMO

To: Members of the Ethics and Business Conduct Committee
From: Susan Litzinger, Director of Ethics and Business Conduct
Date: March 1, 20--
Subject: Reported Ethics Cases 20-- *SL*

Enclosed is the annual Ethics and Business Conduct Report, as required by CGF Policy CGF-EP-01, for your evaluation, covering the first year of our Ethics Program. This report contains a review of the ethics cases handled by CGF Ethics officers and managers during 20--.

The ethics cases reported are analyzed according to two categories: (1) major ethics cases, or those potentially involving serious violations of company policy or illegal conduct, and (2) minor ethics cases, or those that do not involve serious policy violations or illegal conduct. The report also examines the mode of contact in all of the reported cases and the disposition of the substantiated major ethics cases.

It is my hope that this report will provide the Committee with the information needed to assess the effectiveness of the first year of CGF's Ethics Program and to plan for the coming year. Please let me know if you have any questions about this report or if you need any further information. I may be reached at (555) 211-2121, and by email at <sl@cgf.com>.

Technical Report, 1973 **SME Mining Engineering Handbook, Third Edition** Peter Darling, Society for Mining, Metallurgy, and Exploration (U.S.), 2011 This third edition of the SME Mining Engineering Handbook reaffirms its international reputation as the handbook of choice for today's practicing mining engineer. It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals. Virtually all of the information is original content representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term; why such changes are inevitable; what this will mean in terms of challenges and how they could be managed; Explaining the mechanics associated with the multifaceted world of mine and mineral economics from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash flow issues associated with mine planning at a mature operation; Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving, optimization, or process dewatering methods; Examining in detail the methods and equipment available to achieve efficient, predictable, and safe rock breaking, whether employing a tunnel boring machine for development work, mineral extraction using a mobile miner, or cast blasting at a surface coal operation; Identifying the salient points that dictate which is the safest, most efficient, and most versatile extraction method to employ, as well as describing in detail how each alternative is engineered; Discussing the impacts that social and environmental issues have on mining from the pre-exploration phase to end-of-mine issues and beyond, and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders. **Simulation**

Technical Report - Massachusetts Institute of Technology, Research Laboratory of Electronics Massachusetts Institute of Technology, Research Laboratory of Electronics, 1964 Frost Action Effects on Pavements: Technical report Gary L. Hoffman, Gaylord Cumberland, Amar C. Bhajandas, 1979 Prompted by the continuing frost damage experienced throughout Pennsylvania, the Pennsylvania Department of Transportation Bureau of Materials Testing and Research initiated a research project in 1969 to evaluate the frost problem in the State. This research project deals primarily with statistically analyzing freezing index variation, frost depth prediction techniques, and ensuing appropriate frost design changes. Data for these analyses are available from 14 field test sites across Pennsylvania which have been monitored monthly throughout the last 8 freezing seasons. Frost depths predicted by two theoretical methods and one empirical method are statistically regressed with actual maximum frost depths at the field sites. The sensitivity of the prediction to variations in the pertinent dependent variables are also considered. The best prediction technique for the Pennsylvania data set is chosen and comments on
