

DRUG NAMES

Drug names are categorized into generic and brand names. The generic name is the official name of the drug, while the brand name is the name used by the manufacturer. Some drugs have multiple brand names. It is important to know both names to avoid confusion and ensure proper medication management.

RESTRICTED ACCESS

Some medications are classified as restricted access drugs (RADs) because they have a high potential for abuse or addiction. These drugs are tightly controlled, and their use is limited to specific medical conditions. Examples include certain opioids and benzodiazepines. Patients with RADs must have a prescription from a healthcare provider and may be required to use the drug at a specialized pharmacy.

Drug allergies are hypersensitive reactions that occur when the immune system reacts to a substance. Symptoms can range from mild skin rashes to severe anaphylaxis, which can be life-threatening. Common allergens include penicillin, sulfonamides, and latex. Patients with drug allergies should always inform their healthcare provider and pharmacist. It is crucial to read medication labels and avoid allergens to prevent a reaction.
