Moving Students of Color from Consumers to Producers of Technology Rankin, Yolanda,Thomas, Jakita,2016-12-12 In recent years diversity in learning environments has become a pivotal topic of conversation for educators By enhancing underrepresented students computational thinking skills it creates more room for future career opportunities Moving Students of Color from Consumers to Producers of Technology is a comprehensive reference source that provides innovative

perspectives on the need for diversity in computer science and engineering disciplines and examines best practices to build upon students knowledge bases Featuring coverage on an expansive number of topics and perspectives such as computational algorithmic thinking STEM diversity and distributed mentorship this publication is ideally designed for academicians researchers and students interested in efforts to broaden participation in computer science careers fields for underrepresented students   Computing the Sentence Anat Ninio,2025-12-18 Developmental research is abandoning formal syntax probably because Chomskyan generative syntax lacks psychological reality Some studies opt for pure statistics based definitions of syntactic knowledge as if humans were similar to Large Language Models of AI and had no structurally meaningful concepts of syntactic relations Others tend to Constructivist syntax where patterns of elements are said to possess associated semantic meaning The problem is that the core syntactic relations that young children acquire such as verb object and verb subject combinations do not possess particular associated semantics meaning that the Constructivist approach is not a helpful vehicle for understanding syntactic acquisition In this book Anat Ninio approaches syntactic development from a novel point of view within the framework of Relevance Theory a theory of pragmatics with a strong commitment to a cognitive conceptualization of linguistic competence This theory s architecture of linguistic information acknowledges the existence of procedural instructions as part of the content of words covering various processing acts including syntactic combination Methodologically the study employs computer programming algorithms as heuristic models for the cognitive combinatory processes of syntax computer programs being a close analogue to mental plans for solving computational problems The unusual framework and methodology adopted in the book represent a break with current approaches in developmental psycholinguistics and perhaps even with the teachings of mainstream linguistics The first part of the book proposes a procedural syntax of the central patterns of English covering argument structure constructions phrasal and clausal combinations of function words and content words wh questions relative clauses and coordination and gapping This modelling resolves significant issues that have been eluding linguistic theory for decades The second part of the book describes the development of certain syntactic procedures in English speaking children employing a microgenetic analysis to demonstrate that syntactic learning is guesswork by trial and error Despite the apparent chaos the many different attempts that children make to arrive at some syntactic construct belong to a single learning process and gradually converge on the adult algorithm Defining syntax in terms of combinatory procedures provides a novel perspective on our predictive brain on language structure and on cross linguistic variation   American Book Publishing Record ,2006   *Forthcoming Books* Rose Arny,1999   Book Review Index Cumulation Dana Ferguson,2005-09 Book Review Index provides quick access to reviews of books periodicals books on tape and electronic media representing a wide range of popular academic and professional interests The up to date coverage wide scope and inclusion of citations for both newly published and older materials make Book Review Index an exceptionally useful reference tool More than 600 publications are indexed including
