## **Guide To Perfect Pecs:**

Marine Pilotage Great Britain: Parliament: House of Commons: Transport Committee,2013-03-07 This report questions whether the Department for Transport is striking the appropriate balance between its role as a regulator of port safety and its aim to promote the commercial attractiveness of UK ports This follows evidence that most ports fail to confirm to Government that they comply with best practice guidance on port safety and the Maritime and Coastguard Agency has the resources to conduct just four port health checks each year Representatives of marine pilots who guide ships in and out of ports lack confidence that the Department for Transport understands their concerns and the requirements of their work and shares their aim of enhancing maritime safety The Committee is opposed to a proposal supported by Government to relax the rules on the granting of pilotage exemption certificates to more junior navigating officers which could jeopardise safety If the Government insists on pressing ahead with this change the Committee recommends that the impact of the change should be monitored Other recommendations include that the Maritime and Coastguard Agency should broaden its safety inspection programme so that it undertakes eight inspections per annum ports should be required to publish statistics on accidents and near misses the Government should use its influence to persuade harbour authorities to accept national standards as to who can be authorised as a pilot if national standards are not adopted the case for legislation on this issue will be compelling

Time Out Guide Pubs & Bars ,2003      Electromagnetic Optimization by Genetic Algorithms

Yahya Rahmat-Samii, Eric Michielssen, 1999-07-23 Authoritative coverage of a revolutionary technique for overcoming problems in electromagnetic design Genetic algorithms are stochastic search procedures modeled on the Darwinian concepts of natural selection and evolution The machinery of genetic algorithms utilizes an optimization methodology that allows a global search of the cost surface via statistical random processes dictated by the Darwinian evolutionary concept These easily programmed and readily implemented procedures robustly locate extrema of highly multimodal functions and therefore are particularly well suited to finding solutions to a broad range of electromagnetic optimization problems

Electromagnetic Optimization by Genetic Algorithms is the first book devoted exclusively to the application of genetic algorithms to electromagnetic device design. Compiled by two highly competent and well respected members of the electromagnetics community, this book describes numerous applications of genetic algorithms to the design and optimization of various low and high frequency electromagnetic components. Special features include: Introduction by David E Goldberg, A Meditation on the Application of Genetic Algorithms, Design of linear and planar arrays using genetic algorithms, Application of genetic algorithms to the design of broadband wire and integrated antennas, Genetic algorithm driven design of dielectric gratings and frequency selective surfaces, Synthesis of magnetostatic devices using genetic algorithms, Application of genetic algorithms to multiobjective electromagnetic backscattering optimization, A comprehensive list of the up to date references applicable to electromagnetic design problems. Supplemented with more than 250 illustrations, *Electromagnetic Optimization by Genetic Algorithms* is a powerful resource for electrical engineers interested in modern electromagnetic designs and an indispensable reference for university researchers.
