- If codes other than those listed above are indicated, verify the code. If the code indicated is not listed above, replace the ECM.
- The MIL may come on, indicating a system problem when, in fact, there is a poor or intermittent electrical connection. First, check the electrical connections, clean or repair connections if necessary.
- The MIL and D4 indicator light may light simultaneously when the self-diagnosis indicator blinks 3, 6, 7 and 17. Check the PGM-FI system according to the PGM-FI system troubleshooting, then recheck the D4 indicator light. If it lights, see page 14-50, 51.
- The MIL does not come on when there is a malfunction in the A/T FI signal or electrical load detector circuits. However, it will indicate the codes when the service check connector is jumped.
