On Delivery

When a new crane is delivered, follow the instructions outlined in the latest version of Technical Bulletin Gen- and Series #013. A copy of this bulletin can be obtained from your Distributor.

Operating Safety

Remember **SAFETY** every day. Someone's LIFE may depend on it. **MAKING YOUR OWN**.

Safe operation of a hydraulic crane requires a well trained, qualified operator. Crane operation is more involved than it may appear, and operation by a novice or unqualified person can result in a serious accident.

When a hydraulic crane is maintained and used properly it can be a safe, highly productive piece of equipment, but if misused properly, it can be dangerous.

Read Safety — You, the operator, are in charge of an important piece of equipment. It is very important that you know what it can do. It is also important that you know what it should not do. An set of instructions can anticipate all of the situations you will encounter. The rules given here cover the general usage, and some of the more common specific cases. If conditions are not covered by these rules, consult your nearest distributor. A phone call could save someone's life.

General Safety Rules

The following is a list of safety rules which should be followed during all crane operations.

Operator Awareness

1. Read the operator's manual and heed it. The manual contains important information.
2. An operator must not eat, read, or otherwise divert his attention while operating a crane. Remember - operating is a full-time job.
3. Don't smoke when fueling, or fuel up near an open flame. Keep the nozzle in contact with the filler neck to prevent static electric sparks. Shut down the engine when fueling.
4. Keep fingers, feet, and clothing away from sprockets, drums, and ropes unless the crane is shut down and everyone knows what you are doing. Do not place a hand on wire ropes when climbing on the crane. A sudden movement could pull them into the drums or sprockets.
5. Avoid blocking through any holes in the boom, to prevent movement of the individual sections, before putting your hands or tools inside the boom. Unsupported movement of the boom sections could sever fingers, hands, arms, etc.
