

# Human Inheritance Lab

## Objectives

To determine phenotypic characteristics and genotypes for human inheritable traits.  
To determine the frequency (%) of dominant and recessive trait in population.

## Materials

### Class

## Procedure

Obtain the phenotypic characteristics and the corresponding gene genotypes for the traits listed below:

- In the first row of the table 1, list the 27 characteristics below. For each one, list the dominant phenotype and the recessive phenotype. Use the examples in the table for correct formatting.
- In the corresponding cell of table 1, write your phenotype and determine its dominance or recessive.
- In the third column of table 1, write your genotype based on your phenotype.

## Questions

- If you show the recessive trait, then you must be homozygous recessive.
- If you show a dominant trait, you may be heterozygous/dominant (Hh) or homozygous for that trait.
  - If one of your parents shows the recessive trait, then you must have passed on a gene for the recessive trait, and you would be heterozygous for that trait.
  - If neither of your parents shows the recessive trait, you may not know if you are heterozygous or homozygous dominant for that trait. In that case, you **may** provide genotypes (heterozygous and homozygous dominant).

\*\*\* If you need help, you may ask your parents about their traits. \* Do not write your parents' traits! \*\*

\*\*\* If you can't get yourself into a dominant/recessive gene pattern, please give **both** possible genotypes for dominant/recessive gene.
