	External Ear The external ear consists of the auricle (pinna) and the ear canal. The auricle is made of cartilage and is responsible for collecting sound waves. The ear canal leads to the eardrum (tympanic membrane).	Middle Ear The middle ear is located behind the eardrum and contains three ossicles: the malleus, incus, and stapes. These bones are responsible for transmitting sound vibrations from the eardrum to the inner ear.	Internal Ear The internal ear is located deep within the skull and contains the cochlea and vestibular system. The cochlea is responsible for converting sound vibrations into electrical signals that the brain can interpret. The vestibular system is responsible for maintaining balance and spatial orientation.	Common ENT Disorders Common ENT disorders include otitis media (middle ear infection), sinusitis (inflammation of the sinuses), allergic rhinitis (hay fever), and otitis externa (ear infection). Other conditions include hearing loss, tinnitus (ringing in the ears), and vertigo (dizziness).	ENT History The history of ENT medicine is long and varied. In ancient times, treatments were often based on superstition and folklore. Over time, the field has become more scientific and specialized, with the development of various surgical techniques and medical treatments.	ENT Examination The ENT examination is a comprehensive physical exam of the head and neck. It includes inspection of the ears, nose, and throat, as well as palpation of the neck and lymph nodes. Specialized tests like otoscopy and laryngoscopy may also be performed.	ENT Treatment Treatment for ENT disorders varies depending on the condition. It may include medical management (antibiotics, decongestants, steroids) or surgical intervention (tympanoplasty, sinus surgery, laryngectomy). Supportive care like hearing aids and speech therapy is also available.
	Nasal Cavity The nasal cavity is the part of the respiratory system inside the nose. It is lined with mucous membranes and contains the olfactory epithelium, which is responsible for the sense of smell. The nasal cavity also filters and warms the air we breathe.	Sinuses The sinuses are air-filled cavities in the skull that drain into the nasal cavity. They help to humidify and filter the air we breathe. The four main sinuses are the maxillary, ethmoid, sphenoid, and frontal sinuses.	Throat (Pharynx) The pharynx is the part of the respiratory and digestive tracts that is common to both. It is located at the back of the neck and is responsible for moving food and air between the mouth and the rest of the body.
