

Maytag Wringer Washer Operating Guide

WRINGER OPERATION

With the wringer safety clutch activated the vertical shaft provides the drive to the wringer head drive shaft.

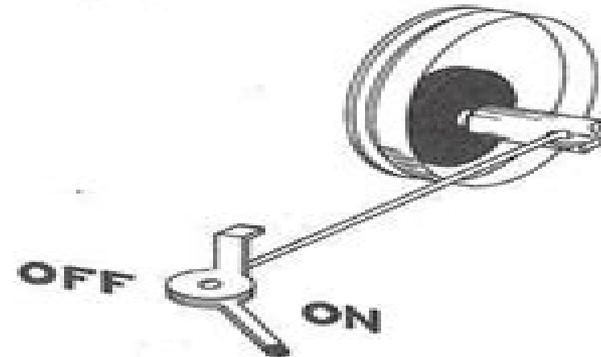

When the wringer control handle is moved to the operating position the cams move the collar, (1) and slides the key, (2) up or down, (depending on the direction the handle is turned). The key will engage with one of the drive springs, (3) when the key engages with the drive springs this causes the spring to expand against the inside of the pinion, (4) and drive sleeve, (5), the pinion engaged with the crown gear, (6) drives the crown gear and lower wringer roll.

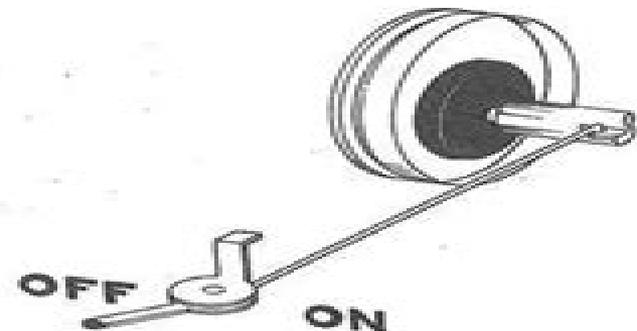

NOTE: A slight hesitation, until the spring is expanded inside of the pinion and sleeve, may occur between positioning of the control handle and starting of the lower wringer roll.

OPERATION OF PUMP - MODELS E2LP & N2LP

With the pump handle moved to the "ON" position the pump is pivoted and the pump wheel engages the inside edge of the power unit pulley. The power unit pulley turns the pump wheel operating the pump.

With the pump handle moved to the "OFF" position the pump wheel is pivoted away from the power unit pulley disengaging the pump and stopping operation.
