New Challenges in the Research of Academic Achievement: Measures, Methods, and Results Juan Luis Castejon, José Carlos Núñez, Raquel Gilar-Corbi, Iván Manuel Jorrín Abellán, 2021-02-24 *Missouri Conservationist*, 2014 *The Oxford Handbook of Expertise and Democratic Politics* Gil Eyal, Thomas Medvetz, 2023 In *The Oxford Handbook of Expertise and Democratic Politics* Gil Eyal and Thomas Medvetz have brought together a broad group of scholars who have engaged substantively and theoretically with debates regarding the nature of expertise and the social roles of experts to examine these areas within sociology and allied disciplines. The analyses take an historical and relational approach to the topic and are motivated by the sense that growing mistrust in experts represents a danger to democratic politics today. Bringing together investigations from social scientists, philosophers, and legal scholars into the political dimensions of expertise, this Handbook connects interdisciplinary work done in science and technology studies with the more classic concerns and concepts of sociologists of professions and intellectuals.

Linking Optical and Chemical Properties of Dissolved Organic Matter in Natural Waters Christopher L. Osburn, Thomas S. Bianchi, 2017-01-17 A substantial increase in the number of studies using the optical properties (absorbance and fluorescence) of dissolved organic matter (DOM) as a proxy for its chemical properties in estuaries and the coastal and open ocean has occurred during the last decade. We are making progress on finding the actual chemical compounds or phenomena responsible for DOM's optical properties. Ultrahigh resolution mass spectrometry, in particular, has made important progress in making the key connections between optics and chemistry. But serious questions remain, and the last major special issue on DOM optics and chemistry occurred nearly 10 years ago. Controversies remain from the non-specific optical properties of DOM that are not linked to discrete sources and sometimes provide conflicting information. The use of optics, which is relatively easier to employ in synoptic and high resolution sampling to determine chemistry, is a critical connection to make and can lead to major advances in our understanding of organic matter cycling in all aquatic ecosystems. The contentions and controversies raised by our poor understanding of the linkages between optics and chemistry of DOM are bottlenecks that need to be addressed and overcome.
