Unmanned Aircraft Systems Ella Atkins, Anibal Ollero, Antonios Tsourdos, 2017-01-17. UNMANNED AIRCRAFT SYSTEMS. UNMANNED AIRCRAFT SYSTEMS. An unmanned aircraft system (UAS), sometimes called a drone, is an aircraft without a human pilot on board. Instead, the UAS can be controlled by an operator station on the ground or may be autonomous in operation. UAS are capable of addressing a broad range of applications in diverse complex environments. Traditionally employed in mainly military applications, recent regulatory changes around the world are leading to an explosion of interest and wide-ranging new applications for UAS in civil airspace. Covering the design, development, operation and mission profiles of unmanned aircraft systems, this single comprehensive volume forms a complete stand-alone reference on the topic. The volume integrates with the online Wiley Encyclopedia of Aerospace Engineering, providing many new and updated articles for existing subscribers to that work. The chapters cover the following items: Airframe configurations and design, launch systems, power generation, propulsion, Operations, missions, integration, issues and airspace access, Coordination, multivehicle cooperation and human oversight. With contributions from leading experts, this volume is intended to be a valuable addition and a useful resource for aerospace manufacturers and suppliers, governmental and industrial aerospace research establishments, airline and aviation industries, university engineering and science departments and industry analysts, consultants and researchers.
