A Brief Guide to Writing the Psychology Paper

The Challenges of Writing in Psychology

Psychology writing, like writing in the other sciences, is meant to inform the reader about a new idea, theory or experiment. Toward this end, academic psychologists emphasize the importance of clarity and brevity in writing while minimizing descriptive language and complex sentence structure. The best writers of psychology have the ability to make complex ideas understandable to people outside of their area of expertise.

When you write a psychology paper, you are, above all, writing to convey factual knowledge that is supported by research. You are striving to be precise, and thus you should expect every word you write to be read literally. Psychology writing can be very dense, with many references to previous research. Writers of psychology almost never directly quote a source. Instead, they distill the essence of the idea or finding, and cite the appropriate source. In the humanities, writers may repeat words or phrases for emphasis; in psychology writers rarely repeat words and phrases, and when they do so it is only to aid in clarity.

Common Types of Psychology Papers

Research psychologists engage in a variety of kinds of writing, including grant proposals, research applications and renewals, review articles, research articles, and textbooks.

As a student, you are most likely to be asked to write one of two types of papers, either a report of your own actual

or predicted data, which we call an empirical paper, or a summary of other people's research, which we call a literature review. These two types of papers follow the same writing conventions, though their format is slightly different. For both types of papers it is useful to think of Deryl Bem's (2003) metaphor of an hourglass—you start out with a broad introduction, then you narrow your focus so that it gets closer and closer to your specific topic and point, and then toward the end you start to broaden the paper again to focus on the big picture. This structure allows the writer to provide context for the paper's central point. Remember: You need both a topic and a point; even in a literature review, it's not enough simply to reiterate what you've read—you need to add something of your own, some insight or perspective. The context should allow the reader both to understand why what you write is important and to understand your contribution. If you aren't sure how much context is appropriate to offer in your introduction, you should ask your instructor.

Research Summary/Literature Review

The primary goal of a research summary or literature review paper is to synthesize research on a topic in psychology while also shedding a new light on that topic. Writing a literature review paper involves first doing substantial research both online and in the library. The goal of your research should be not just to find all of the relevant articles on the topic, but also to evaluate those sources. Reliable sources in psychology are generally those that have been peer-reviewed by other experts in the field prior to publication. (see Sources section below)
