A Practical Guide to Statistical Quality Improvement Michael R. Beauregard,Raymond J. Mikulak,Barbara A.

Olson,1992-01-09 A Practical Guide to Statistical Quality Improvement Opening Up the Statistical Toolbox is designed as a reference guide for the engineer supervisor and manager The intent of the text is to present conventional statistical quality improvement tools in a user friendly form We have worked to take some of the mystique out of the statistics and help others put these powerful tools to effective use in a Total Quality Manage Management TQM environment This isn t a text on TQM TQM has three elements as shown in Figure i 1 1 Creating the environment 2 The continuous improvement toolbox 3 Employee empowerment This text focuses almost exclusively on the middle element the continuous improvement CI toolbox Further Opening Up the Statistical Toolbox does not present a complete set of tools intended to fill the CI toolbox only the statistical tools and some of the basic team process tools are covered The CI toolbox in reality will never get filled A comprehensive toolbox will include extensive team process skills and technology specific tools complimentary to the statistical tools included here **THE THREE KEY ELEMENTS OF TQM THE CONTINUOUS IMPROVEMENT TOOLBOX EMPLOYEE EMPOWERMENT** FIGURE i I **Frontiers in Statistical Quality Control 6** Hans-Joachim Lenz,Peter-Theodor Wilrich,2012-12-06 In the 1920 s Walter Shewhart visualized that the marriage of statistical methods and manufacturing

processes would produce reliable and consistent quality products Shewhart 1931 conceived the idea of statistical process control SPC and developed the well known and appropriately named Shewhart control chart However from the 1930s to the 1990s literature on SPC schemes have been captured by the Shewhart paradigm of normality independence and homogeneous variance When in fact the problems facing today's industries are more inconsistent than those faced by Shewhart in the 1930s As a result of the advances in machine and sensor technology process data can often be collected on line In this situation the process observations that result from data collection activities will frequently not be serially independent but autocorrelated Autocorrelation has a significant impact on a control chart the process may not exhibit a state of statistical control when in fact it is in control As the prevalence of this type of data is expected to increase in industry Hahn 1989 so does the need to control and monitor it Equivalently literature has reflected this trend and research in the area of SPC with autocorrelated data continues so that effective methods of handling correlated data are available This type of data regularly occurs in the chemical and process industries and is pervasive in computer integrated manufacturing environments clinical laboratory settings and in the majority of SPC applications across various manufacturing and service industries Alwan 1991 Statistical Quality Control Douglas H. W. Allan, 1959 **A Textbook of Business Statistics** Padmalochan Hazarika, 2007 The textbook continues to provide a comprehensive coverage of important topics and concepts in business statistics Written in a lucid manner it would equip the students with the knowledge and practice they need to learn each concept Numerous examples and exercises have been provided for effective understanding Students of BCom and BBA courses would find this book extremely useful
