Maths Part1 Target Digest All

Huangqi Zhang

Maths Part1 Target Digest All:

Math is Precise, Period, vs. Math is Precise, Strings Attached William J. Adams,2010-01-18 This book is the outcome of my conclusion that current mathematics education taken in total is a disaster and that by sharing my experience and thoughts about teaching mathematics I might be helpful to colleagues students and others who are concerned about mathematics education to mitigate this state of affairs Mathematics education disaster in what sense No it s not in the sense that I believe insuffi cient attention is being given to number fundamentals It has to do with the almost unanimously held erroneous view about the nature precision and infallibility of mathematics that we acquire from the current state of mathematics education Current mathematics education does not prepare us for life in the 21st century which requires an understanding of the mathematical modeling perspective of what mathematics can do and its limitations and an appreciation of the questions that should be considered to help us distinguish numbers that inform from those that deceive If the wizards of Wall Street had a 21st century mathematics education there is a good chance that they would not have put unquestioning faith in their value at risk math models and the fi nancial meltdown of 2008 09 would have been avoided or at least softened If the nation s decision makers and the public at large were better educated about what questions to give thought to when numbers continually hurled at them are the basis for decision making they would be less vulnerable to accepting faulty numbers and all of us would be less at risk to the consequences of bad decision making

Mathematics of Data Fusion

I.R. Goodman,R.P. Mahler,Hung T. Nguyen,2013-03-14 Data fusion or information fusion are names which have been primarily assigned to military oriented problems In military applications typical data fusion problems are multisensor multitarget detection object identification tracking threat assessment mission assessment and mission planning among many others However it is clear that the basic underlying concepts underlying such fusion procedures can often be used in nonmilitary applications as well The purpose of this book is twofold First to point out present gaps in the way data fusion problems are conceptually treated Second to address this issue by exhibiting mathematical tools which treat combination of evidence in the presence of uncertainty in a more systematic and comprehensive way These techniques are based essentially on two novel ideas relating to probability theory the newly developed fields of random set theory and conditional and relational event algebra This volume is intended to be both an update on research progress on data fusion and an introduction to potentially powerful new techniques fuzzy logic random set theory and conditional and relational event algebra Audience This volume can be used as a reference book for researchers and practitioners in data fusion or expert systems theory or for graduate students as text for a research seminar or graduate level course
