

# How to Find the Unit Rate

The **unit rate** is a ratio that compares a quantity to one unit of another quantity. It describes how much of something occurs, is produced, or exists per one unit of another measure, such as "miles per hour" or "price per item."

To find the unit rate, you need to determine the value for one unit and then determine the value for the quantity you need.

## Example

If 5 pens cost \$1, then 1 pen costs 20¢.

$$\text{\$1} \div 5 \text{ pens} = 20\text{¢ per pen}$$

This would be the unit rate or the cost per pen (unit cost).

You can find out how much  $x$  pens cost by multiplying 20 by the number of pens,  $x$ .
