Optimization of Power System Problems Mahmoud Pesaran Hajiabbas, Behnam Mohammadi-Ivatloo, 2020-01-06 This book presents integrated optimization methods and algorithms for power system problems along with their codes in MATLAB Providing a reliable and secure power and energy system is one of the main challenges of the new era Due to the nonlinear multi objective nature of these problems the traditional methods are not suitable approaches for solving large scale power system operation dilemmas The integration of optimization algorithms into power systems has been discussed in several textbooks but this is the first to include the integration methods and the developed codes As such it is a useful resource for undergraduate and graduate students researchers and engineers trying to solve power and energy optimization problems using modern technical and intelligent systems based on theory and application case studies It is expected that readers have a basic mathematical background

Fault diagnosis of induction motor fed by frequency converter. The signal signature analysis technique Hussain Mahdi, 2016-08-12 Thesis M A from the year 2013 in the subject Electrotechnology Warsaw University of Technology Electrical Engineering language English abstract 3 Phase induction motors are widely used as a source of mechanical power for effective operation and low costs The abnormalities have to be detected in advance to avoid the motor breakdown and the cost associated restraint of plant production This work discusses current and flux leakage spectral analysis techniques for the diagnosis of broken rotor bars and shortcircuited turns in induction motor fed from different AC sources In spite of recent development of various types of models toward motor faults diagnosis and examining different problems associated with 3 phase induction motors the signal spectral analysis is considered as one of most important approaches Most of the models from simple equivalent circuit to more complex d q and a b c models and lastly developed hybrid models are provided for the integration of different forms of current and or voltage unbalance Generally techniques that relate to asymmetry identify asymmetrical motor faults Frequency converters in many applications feed induction motors Such applications which play a major role in industry are growing at a high rate allow to use 3 phase induction motor as variable speed applications This paper proposes application of spectral signature analysis for the detection and diagnosis of abnormal electrical and mechanical conditions which indicates chosen faults in induction motor fed by frequency converter
