Problem 4B**NEWTON'S SECOND LAW****PROBLEM**

A 1.5 kg ball has an acceleration of 2.0 m/s^2 to the left. What is the net force acting on the ball?

SOLUTION

Given: $m = 1.5 \text{ kg}$
 $a = 2.0 \text{ m/s}^2$ to the left.

Unknown: $F = ?$

Use Newton's second law, and solve for F .

$$F = ma$$

Because there is only one force,

$$F = F$$

$$F = (1.5 \text{ kg})(2.0 \text{ m/s}^2) = 3.0 \text{ N}$$

$$F = \boxed{3.0 \text{ N to the left}}$$

ADDITIONAL PRACTICE

- David Parley, a racing driver, survived deceleration from 173 km/h to 0 km/h over a distance of 0.600 m when his car crashed. Assume that Parley's mass is 70.0 kg . What is the average force acting on him during the crash? Compare this force to Parley's weight. (Hint: Calculate the average acceleration first.)
- A giant crane in Washington, D.C. was tested by lifting a $2.00 \times 10^6 \text{ kg}$ load.
 - Find the magnitude of the force needed to lift the load with a net acceleration of 0 m/s^2 .
 - If the same force is applied to pull the load up a smooth slope that makes a 30.0° angle with the horizontal, what would be the acceleration?
- When the cliff hiker jumps in the air, his acceleration upward can be as large as 400.0 times the acceleration due to gravity. (An acceleration this large would instantly kill any human being.) For a hiker whose mass is 80.00 kg , calculate the magnitude of the force exerted by the hiker on the ground at the beginning of the jump, with gravity taken into account. Calculate the magnitude of the force with gravity neglected. Use 9.807 m/s^2 as the value for free-fall acceleration.

Nersessian, 1987-02-28 For some time now the philosophy of science has been undergoing a major transformation It began
when the received view of scientific knowledge that developed by logical positivists and their intellectual descendants was
challenged as bearing little resemblance to and having little relevance for the understanding of real science Subsequently an
overwhelming amount of criticism has been added One would be hard pressed to find anyone who would support the received
view today Yet in the search for a new analysis of scientific knowledge this view continues to exert influence over the tenor of
much of present day philosophy of science in particular over its problems and its methods of analysis There has however
emerged an area within the discipline called by some the new philosophy of science that has been engaged in transforming
the problems and methods of philosophy of science While there is far from a consensus of beliefs in this area most of the
following contentions would be affirmed by those working in it that science is an open ended on going activity whose
character has changed significantly during its history that science is not a monolithic enterprise that good science can lead to
false theories that science has its roots in everyday circumstances needs methods concepts etc **A.L.A. Catalog** American

Analysis of Science Textbooks Myint Swe Khine, 2013-06-26 The critical analysis of science textbooks is vital in improving
teaching and learning at all levels in the subject and this volume sets out a range of academic perspectives on how that
analysis should be done Each chapter focuses on an aspect of science textbook appraisal with coverage of everything from
theoretical and philosophical underpinnings methodological issues and conceptual frameworks for critical analysis to
practical techniques for evaluation Contributions from many of the most distinguished scholars in the field give this
collection its sure footed contemporary relevance reflecting the international standards of UNESCO as well as leading
research organizations such as the American Association for the Advancement of Science whose Project 2061 is an influential
waypoint in developing protocols for textbook analysis Thus the book shows how to gauge aspects of textbooks such as their
treatment of controversial issues graphical depictions scientific historiography vocabulary usage accuracy and readability

The content also covers broader social themes such as the portrayal of women and minorities. Despite newer, more active pedagogies, textbooks continue to have a strong presence in classrooms and to embody students' socio-historical inheritance in science. Despite their ubiquitous presence, they have received relatively little ongoing empirical study. It is imperative that we understand how textbooks influence science learning. This book presents a welcome and much-needed analysis.

Tina A. Grotzer, Harvard University, Cambridge, Massachusetts, USA. The present book provides a much-needed survey of the current state of research into science textbooks and offers a widerange of perspectives to inform the science of writing better science textbooks.
