A Living History of Immunology Kendall Arthur Smith,2015-11-04 In the highly competitive world of biomedical science often the rush to publish and to be recognized as first with a new discovery concept or method is lost in the hurly burly of the moment as the maddening crowd moves on to the next new thing One of the great things about immunology today is that it has only become mature as a science within the last half century and especially within the past 35 years as a consequence of the revolution of molecular immunology which has taken place only since 1980 Consequently most of those who have contributed to our new understanding of how the immune system functions are still alive and well and still contributing Thus A Living History of Immunology collates many stories from the investigators who actually performed the experiments that have established the frontiers of immunology Accordingly this volume combats revisionist science by those who want to alter history by telling the stories a different way than actually happened In this regard one of the good things about science vs other disciplines is that we have the written record of what was done when it was done and by whom Even so we do not have the complete story or narrative of how and why experiments were done and what made the differences that led to success This volume captures and chronicles some of these stories from the past fifty years in immunology

Hiking in European Mountains Pablo Vidal-González,2020-07-20 Nature sports in general and hiking in particular have become in our urban and post industrial societies a growing phenomenon practiced by millions of citizens The motivations and interests of this large group are varied but they have a common element to disconnect from stressful modern life and reconnect with nature National parks and other protected areas are the preferred destinations but they present an challenging contrast for land management conservation versus tourist use While once considered a romantic practice of escape and discovery hiking is now a consumer product and a tourist experience It promises experiences of disconnection quiet and health yet natural spaces are increasingly scarce and more often than not they are crowded by other recreationalists This book presents a multidisciplinary perspective on the latest trends and developments in hiking In particular the authors work from a European perspective with various outdoor recreation models represented and different conservation initiatives explored in the contexts of Spain Norway Poland Germany and Lebanon Collectively the authors attend to hiking as a social phenomenon and economic opportunity which has the potential to sustainably revitalize rural destinations if managed properly
