

Light and Mirrors

SAFETY

- Secure all apparatus, and perform this experiment in a clear area. Swinging or dropped masses can cause serious injury.

OBJECTIVES

- Form images using mirrors.
- Locate images using different methods.

Virtual images

Procedure

1. Secure the normal eye chart to the wall using strong tape.
2. Choose any line on the chart, and step back just until the line can no longer be read clearly. Mark the position on the floor where you are standing with masking tape. Label it "reading point."
3. Measure the distance from the eye chart to the reading point with a meterstick. Record this distance in your notebook, using the appropriate SI units. Also record the number of the line that you were trying to read.
4. Secure a small flat mirror against the wall at chest level using strong tape.
5. Place the back of the reverse eye chart against your chest. Position the chart so that the line that you read appears in the mirror. Step back from the mirror, holding the eye chart against your chest until the image of this line is barely readable.
6. Mark the position on the floor where you are standing with masking tape. Label it "new point."
7. Measure the distance from the eye chart to the new point. Record this distance in your notebook, using the appropriate SI units.

Analysis

- A. Describe the image of the reverse eye chart you saw on the surface of the mirror. Compare it with the appearance of the normal eye chart.
- B. What distance did you measure between the mirror and the reverse eye chart?
- C. What distance did you measure between the starting point and the eye chart on the wall?
- D. Compare your answers in B and C. What is the relationship between the distances?
