

Study Guide B continued**SECTION 4. TRANSCRIPTION**

1. replication (nucleus)
2. transcription (nucleus)
3. translation (cytoplasm)
4. Contains the sugar ribose
5. Has the bases A, C, G, and T
6. Typically single-stranded
7. RNA polymerase
8. A large transcription complex, including RNA polymerase and other proteins, assembles at the start of a gene and begins to unwind the DNA. Using one strand of the DNA as a template, RNA polymerase strings together a complementary strand of RNA. The RNA strand detaches from the DNA as it is transcribed, and the DNA zips back together.
9. **mRNA:** intermediate message that is translated to form a protein; **rRNA:** forms part of ribosomes; **tRNA:** brings amino acids from the cytoplasm to a ribosome to help make the growing protein
10. Both occur within the nucleus of eukaryotic cells, are catalyzed by large enzymes, involve unwinding of the DNA double helix, involve complementary base pairing of the DNA strand, and are highly regulated by the cell.
11. Replication occurs only once during each round of the cell cycle and makes a double-stranded copy of all the DNA in a cell. Transcription occurs repeatedly throughout the cell cycle to make proteins, rRNAs, and tRNAs as needed by a cell. Transcription makes a single-stranded complement of only a particular DNA sequence.
12. mRNA is a form of the DNA message that tells the cell what type of protein to make. rRNA is a key component of ribosomes. tRNA transfers, or carries, amino acids from the cytoplasm to the ribosome.
13. the process of copying a sequence of DNA to produce a complementary strand of RNA

SECTION 5. TRANSLATION

1. the process that converts an mRNA message into a polypeptide, or protein
 2. sequences of three nucleotides that code for an amino acid
 3. RNA
 4. the order in which nucleotides are read; they are read as a series of three, nonoverlapping nucleotides
 5. arginine (Arg)
 6. stop codon
 7. UGG
 8. glycine (Gly)
 9. Ribosomes, tRNA molecules
 10. small
 11. large
 12. amino acid, anticodon
- Cycle Diagram:**
- A. An exposed codon attracts a complementary tRNA bearing an amino acid.
 - B. the ribosome forms a peptide bond between the amino acids. It breaks the bond between the first amino acid and tRNA.
 - C. the ribosome pulls the mRNA strand the length of one codon. The first tRNA exits the ribosome, and another codon is exposed.
13. codons
 14. anticodon
 15. Stop codons indicate where translation is to stop. (Students may mention that methionine is also a start codon.)

SECTION 6. GENE EXPRESSION AND REGULATION

1. Regulation allows the cells to better respond to stimuli and to conserve energy and materials.
2. transcription
3. promoter
4. operon, promoter, operator, genes
5. RNA polymerase is blocked by the repressor.
6. The genes are not transcribed.

Lee, 1993-08-21 We are poised at the doorway to a future which could surpass the Industrial Revolution in its impact on the world We are beginning to scrutinize genes in order to read the very history of evolution and to alter plants and animals in ways undreamed of only a few years ago As the tools of science have become more sophisticated scientists have been able to delve deeply into the inner recesses of cells The fruit of their labor the new biology promises us an unprecedented understanding of genes offering an illuminating view into the most intimate operations of living things from microbes to humans and with that the potential to gain increasing control over life itself Our gene future will soon present us with a cornucopia of products by drawing upon a variety of organisms plants animals and even human cells that will influence the lives and health of us all As Thomas Lee a biologist and author of the acclaimed *The Human Genome Project Cracking the Genetic Code of Life* so vividly shows the new biology is already beginning to make its mark on our lives Every week newspapers announce that scientists have found the gene for a disease such as cystic fibrosis or a particular form of cancer or have seized on a gene therapy to try to combat it The controversy over using DNA fingerprinting as admissible evidence in court has sparked public concern The injecting of experimental genes into humans and animals has triggered recent debates Soon genetically engineered tomatoes and other transgenic vegetables will be available on the shelves of our local grocers As Lee so wisely and eloquently cautions there may be perils along this pathway as well as miraculous discoveries Do dangers lurk in this new technological approach to nature May we

unwittingly be doing irreparable harm to individuals not to mention the biosphere This perceptive author even handedly assesses the controversies surrounding the perils that may await us as molecular science m **DNA & Genetic Engineering** Robert Snedden,2007-08-25 Looks at cells as life s building blocks focusing on DNA and genetic engineering discussing DNA as a cell s instruction manual explaining how DNA is put together and exploring some of the controversies surrounding genetic engineering and gene therapy **Crf#14 Genes/Action Holt Biology 2008** Holt Rinehart & Winston,2008-01-01 *The Genetic Revolution* Bernard D.
