, 1999-08     *Handbook of Research Methods in Cardiovascular Behavioral Medicine* Neil Schneiderman, Stephen M. Weiss, Peter G. Kaufmann, 2013-11-21 Cardiovascular disease continues to be the number one medical condition in the United States. Behavioral medicine was developed and shaped into the one source of morbidity and mortality in our country following the Framingham study. Despite a 35% reduction since 1964, these behavioral medicine interventions have not been fully implemented. Behavioral medicine is the interdisciplinary field concerned with the development and integration of behavioral and biomedical science knowledge and techniques. The United States has lost nearly 1,000,000 lives each year in cardiovascular disease. The Framingham study among others has identified the application of this knowledge and these techniques to prevention, diagnosis, treatment, and rehabilitation. Identified three major risk factors implicated in the development of CHD: smoking, elevated serum cholesterol, and high blood pressure. Castelli et al. (1978) developed the concept of biobehavioral collaboration. In 1986, given that these factors account for less than 50% of the variance associated with CHD, scientists and clinicians of many disciplines considered how they might more effectively address the problem. Jenkins (1976) it has become obvious that additional diagnostic, treatment, and prevention strategies must be identified if further progress is to be made in disease prevention and simultaneously among others behavioral psychology control.
