CHAPTER 6: CHEMICAL BONDING

The following pages contain the bulk (but not all) of the information for the chapter 6 test. Focus on this content, but make sure to review class notes, activities, handouts, questions, etc. If you study this document and NOTHING else, you should at least be able to PASS the test. ***** Test items will be recall, examples, and/or application of this content. *****

OUTCOMES

- Collaborate with peer(s) to understand chemistry content (C C)
- Communicate chemistry content to teacher and peer(s) (E C)
- 6.2: Use the Lewis dot notation, illustrate the covalent bond as the sharing of electrons (F & PK)
- 6.3: List important physical properties of ionic compounds; sum of oxidation numbers = zero (F & PK)

6.1: INTRODUCTION TO CHEMICAL BONDING

- **Vocabulary**
 - **chemical bond** -- the attractive force that holds atoms or ions together
 - **ionic bonding** -- a force that attracts electrons from one atom to another, which transforms a neutral atom into an ion
 - **covalent bonding** -- a bond formed when atoms share one or more pairs of electrons
 - **nonpolar-covalent bond** -- a covalent bond in which the bonding electrons are equally attracted to both bonded atoms
 - **polar** -- describes a molecule in which the positive and negative charges are separated
 - **polar-covalent bond** -- a covalent bond in which a pair of electrons shared by two atoms is held more closely by one atom
- **Chapter Highlights**
 - Most atoms are chemically bonded to other atoms. The three major types of chemical bonding are ionic, covalent, and metallic.
 - In general, atoms of metals bond ionically with atoms of nonmetals, atoms of metals bond metallically with each other, and atoms of nonmetals bond covalently with each other.

6.2: COVALENT BONDING AND MOLECULAR COMPOUNDS

- **Vocabulary**
 - **molecule** -- a group of atoms that are held together by chemical forces; a molecule is the smallest unit of matter that can exist by itself and retain all of a substance's chemical properties
 - **molecular compound** -- a chemical compound whose simplest units are molecules
 - **chemical formula** -- a combination of chemical symbols and numbers to represent a substance
 - **molecular formula** -- a chemical formula that shows the number and kinds of atoms in a molecule, but not the arrangement of the atoms
 - **electron-dot notation** -- an electron configuration notation in which only the valence electrons of an atom of a particular element are shown, indicated by dots placed around the element's symbol
 - **Lewis structure** -- a structural formula in which electrons are represented by dots; dot pairs or dashes between two atomic symbols represent pairs in covalent bonds.
See examples at right for LEWIS STRUCTURES of NF₃ and OCl₂
 - **structural formula** -- a formula that indicates the location of the atoms, groups, or ions relative to one another in a molecule and that indicates the number and location of chemical bonds
 - **single bond** -- a covalent bond in which two atoms share one pair of electrons
 - **multiple bond** -- a bond in which the atoms share more than one pair of electrons, such as a double bond or a triple bond
 - **resonance** -- the bonding in molecules or ions that cannot be correctly represented by a single Lewis structure
- **Chapter Highlights**
 - Atoms in molecules are joined by covalent bonds. In a covalent bond, two atoms share one or more pairs of electrons.

Chemistry for the Life Sciences J. G. Dawber,Alan Thomas Moore,1973 Chemistry For the Life Sciences covers the basic chemistry of HNC HND courses in applied biology and medical laboratory subjects but the treatment is also appropriate to post HNC courses in biochemistry such as the M I Biol and to certain degree level courses The text is designed to provide a unified approach to the subject with roughly equivalent amounts of physical and organic chemistry and a small amount of inorganic chemistry in chapter one It proceeds from a relatively pure chemistry in the early chapters to aspects of biochemistry and molecular biology in later chapters Publisher *The Science Teacher* ,1979 Some issues are accompanied by a CD ROM on a selected topic **Comprehensive Chemical Kinetics: Organic reactions. v. 8. Trace Environmental Quantitative Analysis Paul R. Loconto,2020-12-27 A thorough and timely update this new edition presents principles techniques and applications in this sub discipline of analytical chemistry for quantifying traces of potentially toxic organic and inorganic chemical substances found in air soil fish and water as well as serum plasma urine and other body fluids The author addresses regulatory aspects calibration verification and the statistical treatment of analytical data including instrument detection limits quality assurance quality control sampling and sample preparation and techniques that are used to quantify trace concentrations of organic and inorganic chemical substances Key Features Fundamental principles are introduced for the more significant experimental approaches to sample preparation Principles of instrumental analysis determinative techniques for trace organics and trace inorganics analysis An introduction to the statistical treatment of trace analytical data How to calculate instrument detection limits based on weighted least squares confidence band calibration statistics Includes an updated series of student tested experiments *An Introduction to Atmospheric Physics* Robert G. Fleagle,Joost A. Businger,1981-01-09

This book is addressed to those who wish to understand the relationship between atmospheric phenomena and the nature of matter as expressed in the principles of physics The interesting atmospheric phenomena are more than applications of gravitation of thermodynamics of hydrodynamics or of electrodynamics and mastery of the results of controlled experiment and of the related theory alone does not imply an understanding of atmospheric phenomena This distinction arises because the extent and the complexity of the atmosphere permit effects and interactions that are entirely negligible in the laboratory or are deliberately excluded from it the objective of laboratory physics is by isolating the relevant variables to reveal the fundamental properties of matter whereas the objective of atmospheric physics or of any observational science is to understand those phenomena that are characteristic of the whole system For these reasons the exposition of atmospheric physics requires substantial extensions of classical physics It also requires that understanding be based on a coherent way of seeing the ensemble of atmospheric phenomena Only then is understanding likely to stimulate still more general insights
