An Introduction to the Engineering of Fast Nuclear Reactors Anthony M. Judd, 2014-02-10 Designed for graduate level engineering students and nuclear engineers who want to expand their knowledge of fast nuclear reactors **Stoichiometry** Sydney Young, 1908 **Automotive Engineering Fundamentals** Richard Stone, Jeffrey K Ball, 2004-04-30 In the

introduction of Automotive Engineering Fundamentals Richard Stone and Jeffrey K Ball provide a fascinating and often amusing history of the passenger vehicle showcasing the various highs and lows of this now indispensable component of civilized societies The authors then provide an overview of the publication which is designed to give the student of automotive engineering a basic understanding of the principles involved with designing a vehicle From engines and transmissions to vehicle aerodynamics and computer modeling the intelligent interesting presentation of core concepts in Automotive Engineering Fundamentals is sure to make this an indispensable resource for engineering students and professionals alike *Handbook of Adhesive Technology, Revised and Expanded* Antonio Pizzi, Kashmiri L. Mittal, 2003-08-06 The Handbook of Adhesive Technology Second Edition exceeds the ambition of its bestselling forerunner by reexamining the mechanisms driving adhesion categories of adhesives techniques for bond formation and evaluation and major industrial applications Integrating modern technological innovations into adhesive preparation and application this greatly expanded and updated edition comprises a total of 26 different adhesive groupings including three new classes The second edition features ten new chapters a 40 page list of resources on adhesives and abundant figures tables equations

Thermodynamics and Heat Power Kurt C. Rolle, 2005 This book presents learners with the fundamental concepts of thermodynamics and their practical application to heat power heat transfer and heating and air conditioning It addresses real world problems in engineering and design rather than focusing on abstract mathematics Chapter topics include the thermodynamic system work heat and reversibility conservation of mass and the first law of thermodynamics equations of state and calorimetry availability and useful work the internal combustion engine and the Otto and Diesel cycles gas turbines jet propulsion and the Brayton cycle steam power generation and the Rankine cycle refrigeration and heat pumps and much more For use in engineering technology programs Industrial Stoichiometry Warren Kendall Lewis, Arthur Hitchcock Radasch, 1926 Fuels and combustion Gas producers Sulfur compounds Metallurgy Crystallization **Fast Breeder Reactors** A. M. Judd, 2013-10-22 Fast Breeder Reactors An Engineering Introduction is an introductory text to fast breeder reactors and covers topics ranging from reactor physics and design to engineering and safety considerations Reactor fuels coolant circuits steam plants and control systems are also discussed This book is comprised of five chapters and opens with a brief summary of the history of fast reactors with emphasis on international and the prospect of making accessible enormous reserves of energy The next chapter deals with the physics of fast reactors and considers calculation methods flux distribution breeding control rods shielding and reactivity coefficients The chemistry of fast reactor fuels is also considered

along with the engineering of the core of a power producing fast reactor and of coolant circuits and steam plants The final chapter examines aspects of reactor safety that are peculiar to sodium cooled oxide fueled fast reactors and describes the inherent features of such a reactor that make for safety followed by an analysis of risks and some of the protective systems that can be used This monograph will be of interest to nuclear scientists physicists and engineers

**Proceedings of the Conference on Safety, Fuels, and Core Design in Large Fast Power Reactors**, 1965 This volume contains the proceedings of the second in a series of annual topical conferences sponsored by Argonne National Laboratory and the U S Atomic Energy Commission on various specific aspects of fast reactor science and technology The first conference which was held in October 1963 was entitled Breeding Economics and Safety in large Fast Power Reactors The proceedings of that conference were issued as ANL 6702 Nor conference was held in 1964 because the Third International Geneva Conference on the Peaceful Uses of Atomic Energy had been scheduled for that year In October 1959 a related conference entitled The Physics of Breeding was held at Argonne The proceedings of that conference was issued as ANL 6122

**Process Equipment and Plant Design** Subhabrata Ray, Gargi Das, 2020-05-29 Process Equipment and Plant Design Principles and Practices takes a holistic approach towards process design in the chemical engineering industry dealing with the design of individual process equipment and its configuration as a complete functional system Chapters cover typical heat and mass transfer systems and equipment included in a chemical engineering curriculum such as heat exchangers heat exchanger networks evaporators distillation absorption adsorption reactors and more The authors expand on additional topics such as industrial cooling systems extraction and topics on process utilities piping and hydraulics including instrumentation and safety basics that supplement the equipment design procedure and help to arrive at a complete plant design The chapters are arranged in sections pertaining to heat and mass transfer processes reacting systems plant hydraulics and process vessels plant auxiliaries and engineered safety as well as a separate chapter showcasing examples of process design in complete plants This comprehensive reference bridges the gap between industry and academia while exploring best practices in design including relevant theories in process design making this a valuable primer for fresh graduates and professionals working on design projects in the industry Serves as a consolidated resource for process and plant design including process utilities and engineered safety Bridges the gap between industry and academia by including practices in design and summarizing relevant theories Presents design solutions as a complete functional system and not merely the design of major equipment Provides design procedures as pseudo code flow chart along with practical considerations

**Intermetallic Compounds** Jack Hall Westbrook, Robert Louis Fleischer, 1995 This third volume continues to set the standard in the field as originally defined by the best selling two volume set Intermetallic Compounds Principles and Practice With contributions from 72 authors from 14 different countries this book introduces a broad range of new topics including new intermetallic families new means of assessment of bonding and stability new properties and phenomena new applications new practical

processes and new research techniques Stand alone chapters set out in a manner that is meaningful to non specialists progressing to include knowledge useful to experts New fully revised and updated chapters on areas of intense research activity or great importance Providing definitions of intermetallic families intended to assist all readers Written for clarity consistency and thoroughness Full and up to date referencing to the literature Critical assessments of the state of the subject Acronym list consolidating new entries with those compiled for the two earlier volumes As with Volumes 1 and 2 this is an invaluable aid to both scientists and engineers Core reading for those who are starting research on intermetallics and for those who wish to exploit the unique properties of intermetallics in practical applications *Practice of Steelmaking 3* Leopold Gmelin,1987-11-30 Part a Text Part b Illustrations *Advances in Heat Transfer Augmentation and Mixed Convection* M.
