Travel Model Validation and Reasonableness Checking Manual, 2010 **Model Validation and Reasonableness Checking Manual** Barton-Aschman Associates, 2001 **Travel Demand Forecasting: Parameters and Techniques**, 2012 TRB's National Cooperative Highway Research Program NCHRP Report 716 Travel Demand Forecasting Parameters and Techniques provides guidelines on travel demand forecasting procedures and their application for helping to solve common transportation problems Urban Transportation Planning in the United States Edward Weiner, 2012-11-13 The development of U S urban transportation policy over the past half century illustrates the changing relationships among federal state and local governments This comprehensive text examines the evolution of urban transportation planning from early developments in highway planning in the 1930s to today's concerns over sustainable development security and pollution control Highlighting major national events the book examines the influence of legislation regulations conferences federal programs and advances in planning procedures and technology The volume provides in depth coverage of the most significant event in transportation planning the Federal Aid Highway Act of 1962 which created a federal mandate for a comprehensive urban transportation planning process carried out cooperatively by states and local governments with federal funding Claiming that urban transportation planning is more sophisticated costly and complex than its highway and transit planning predecessors the book demonstrates how urban transportation planning evolved in response to changes in such factors as the environment energy development patterns intergovernmental coordination and federal transit programs This updated revised and expanded edition features two new chapters on global climate change and managing under conditions of constrained resources and covers the impact of the most recent legislation 50 years after the Highway Act of 1962 emphasizing such timely issues as security oil dependence performance measurement and public private sector collaboration UC Merced and University Community Project, 2009 Routledge Handbook of Transportation Dusan Teodorovic, 2015-08-20 The Routledge Handbook of Transportation offers a current and comprehensive survey of transportation planning and engineering research It provides a step by step introduction to research related to traffic engineering and control transportation planning and performance measurement and evaluation of transportation alternatives The Handbook of Transportation demonstrates models and methods for predicting travel and freight demand planning future transportation networks and developing traffic control systems Readers will learn how to use various engineering concepts and approaches to make future transportation safer more efficient and more sustainable Edited by Dusan Teodorovic and featuring 29 chapters from more than 50 leading global experts with more than 200 illustrations the Routledge Handbook of Transportation is designed as an invaluable resource for professionals and students in transportation planning and engineering **Metropolitan Travel Forecasting** National Research Council (U.S.). Committee for Determination of the State of the Practice in Metropolitan Area Travel Forecasting, 2007-10-18 TRB Special Report 288 Metropolitan Travel

Forecasting Current Practice and Future Direction examines metropolitan travel forecasting models that provide public officials with information to inform decisions on major transportation system investments and policies. The report explores what improvements may be needed to the models and how federal, state, and local agencies can achieve them. According to the committee that produced the report, travel forecasting models in current use are not adequate for many of today's necessary planning and regulatory uses.

Report, 2012. Calibration of a Past Year Demand Model for Model Evaluation. David F. Pearson, Patricia L. Ellis, Stephen P. Farnsworth, 2002. The objective of this project was to perform an evaluation of the ability of the current modeling process in Texas to forecast travel behavior and patterns within the context of a controlled experimental design. The project attempted to calibrate travel demand models using travel surveys conducted in the San Antonio Bexar County area in 1969. These models would then be applied to forecast travel behavior and patterns for the years 1980 and 1990 with the results compared to observed conditions. Due to data limitations, researchers did not consider the model developed for 1970 acceptable in terms of meeting the calibration criteria that were established. This negated the application of the model to 1980 and 1990 since the results could not be interpreted with any confidence. A number of recommendations on the model information needs for retention in future model calibration validation efforts are made. The recommendations provide the basis for examining travel demand models within controlled conditions as a routine part of the modeling process.

Planning and Analysis, 2005. National Research Council (U.S.). Transportation Research Board, 2005. No. 1931. Examines subjects such as how a policy shift in the Netherlands from the national to the regional level created opportunities for engineers and spatial planners to collaborate and how a small town in Oregon managed a combined state highway main street project. This volume of the TRR Journal also includes a paper focusing on three case studies on improved relationships between states and Native American governments. *User Costs on the I-15 Design-build Reconstruction*. Peter T. Martin, 2003. *The Propagation of Uncertainty Through Travel Demand Models*. Yong Zhao, Kara Kockelman, 2000. The future operations of transportation systems involve enormous uncertainty in both input and model parameters. This work investigates the stability of contemporary transport demand model output by quantifying variability in model input such as zonal socioeconomic data and trip generation rates. It simulates the propagation of their variation through a series of common demand models over a simplified twenty-five zone network. The results suggest that uncertainty may be compounded over a series of models and highly correlated across output. The propagated uncertainty varies remarkably in link flows; thus, some link flows may be more uncertain than others. The final step model trip assignment may reduce prior increased uncertainty through the first three steps but generally could not lessen the uncertainty lower than the input uncertainty. Mispredictions at early stages, e.g., trip generation in multi-stage models, appear to amplify across later stages; thus, improvements to these models and their estimates are sorely needed.

Planning and Analysis, 2006. National Research Council (U.S.). Transportation Research Board, 2006. **Refinement of FSUTMS Trip Distribution**

Methodology, 2004 *Uncertainty in Integrated Land Use-transport Models* Anant Pradhan, Kara Kockelman, 2002 This report examines the impact of uncertainty in the land use component of a partially integrated land use transportation modeling system called UrbanSim. Outputs from the land use model LUM act as inputs for a traditional 4 step travel demand model TDM and travel times from the traffic assignment stage of the TDM are fed forward into the subsequent year's LUM. This work examines the propagation of uncertainty across model stages as well as at each model stage over time. A factorized design approach is used to model uncertainty in demographic inputs to the LUM as well as uncertainty in various model parameters. Results suggest that while several model inputs may affect model outputs in the short run, only those inputs having a cumulative effect are likely to have a significant impact on outputs in the long run. Results also suggest that uncertainty in model outputs may increase for the first few years for which the model is run as modified inputs send shocks through the urban system. However, the uncertainty level seems to come down in later years as jobs, households, and developers respond to changed input conditions.

Incorporating Variable Peak-to-daily Ratios Into FSUTMS to Reduce Assignment Errors Albert Gan, 2003 *Input, Parameter, and Spatial Uncertainty in a Fully Integrated Land Use and Transportation Model* Michael James Clay, 2005 **Comparing Short-term Traffic Projections with Traffic Counts, the JUATS 2015 Model**, 2005 *Environment and Planning*, 2002 *Travel Demand and Land Use*, 2003 National Research Council (U.S.). Transportation Research Board, 2003
