Modeling And Data Mining In Blogosphere Huan Liu:

Modeling and Data Mining in Blogosphere Nitin Agarwal, Huan Liu, 2022-06-01 This book offers a comprehensive overview of the various concepts and research issues about blogs or weblogs. It introduces techniques and approaches, tools and applications, and evaluation methodologies with examples and case studies. Blogs allow people to express their thoughts, voice their opinions, and share their experiences and ideas. Blogs also facilitate interactions among individuals, creating a network with unique characteristics. Through the interactions, individuals experience a sense of community. We elaborate on approaches that extract communities and cluster blogs based on information of the bloggers. Open standards and low barrier to publication in Blogosphere have transformed information consumers to producers, generating an overwhelming amount of ever-increasing knowledge about the members, their environment, and symbiosis. We elaborate on approaches that sift through humongous blog data sources to identify influential and trustworthy bloggers, leveraging content and network information. Spam blogs or splogs are an increasing concern in Blogosphere and are discussed in detail with the approaches leveraging supervised machine learning algorithms and interaction patterns. We elaborate on data collection procedures, provide resources for blog data repositories, mention various visualization and analysis tools in Blogosphere, and explain conventional and novel evaluation methodologies to help perform research in the Blogosphere. The book is supported by additional material including lecture slides as well as the complete set of figures used in the book, and the reader is encouraged to visit the book website for the latest information. Table of Contents: Modeling Blogosphere, Blog Clustering and Community Discovery, Influence and Trust, Spam Filtering in Blogosphere, Data Collection and Evaluation. *Blogosphere and its Exploration* Christoph Meinel, Justus Broß, Philipp Berger, Patrick Hennig, 2015-03-20 This book represents an attempt to fully review the phenomenon of the blogosphere. The intention is to provide a reliable guide to understanding and analyzing the world of the unimaginable number of diverse blogs, each consisting of innumerable posts which in their entirety form the blogosphere. We go on to answer the questions of how to grasp the complexity of the blogosphere and extract useful knowledge from it. In setting out to write this book, our central aim was to increase the reader's awareness and understanding of the blogosphere phenomenon, including its structure and characteristics. This can be achieved through a better understanding of individual blogs and their particular technical characteristics, as well as a deeper knowledge of how a single blog is embedded and interconnected within the entire blogosphere. The shape and form of the blogosphere can be described using the analogy of different continents. In our description, the defining features and characteristics of the continents are illustrated by paradigmatic example blogs. Following on from the structural analysis, we provide details of the available methods and describe the complex challenge of automatically retrieving information from the abundance of data contained in the blogosphere. Finally, we present our blog search platform called BLOGINTELLIGENCE and describe all the tools and features we have developed during the last couple of years to explore the blogosphere. *Exploratory Causal Analysis with*

Time Series Data James M. McCracken,2022-06-01 Many scientific disciplines rely on observational data of systems for which it is difficult or impossible to implement controlled experiments Data analysis techniques are required for identifying causal information and relationships directly from such observational data This need has led to the development of many different time series causality approaches and tools including transfer entropy convergent cross mapping CCM and Granger causality statistics A practicing analyst can explore the literature to find many proposals for identifying drivers and causal connections in time series data sets Exploratory causal analysis ECA provides a framework for exploring potential causal structures in time series data sets and is characterized by a myopic goal to determine which data series from a given set of series might be seen as the primary driver In this work ECA is used on several synthetic and empirical data sets and it is found that all of the tested time series causality tools agree with each other and intuitive notions of causality for many simple systems but can provide conflicting causal inferences for more complicated systems It is proposed that such disagreements between different time series causality tools during ECA might provide deeper insight into the data than could be found otherwise

Exploiting the Power of Group Differences Guozhu Dong,2022-05-31 This book presents pattern based problem solving methods for a variety of machine learning and data analysis problems The methods are all based on techniques that exploit the power of group differences They make use of group differences represented using emerging patterns aka contrast patterns which are patterns that match significantly different numbers of instances in different data groups A large number of applications outside of the computing discipline are also included Emerging patterns EPs are useful in many ways EPs can be used as features as simple classifiers as subpopulation signatures characterizations and as triggering conditions for alerts EPs can be used in gene ranking for complex diseases since they capture multi factor interactions The length of EPs can be used to detect anomalies outliers and novelties Emerging contrast pattern based methods for clustering analysis and outlier detection do not need distance metrics avoiding pitfalls of the latter in exploratory analysis of high dimensional data EP based classifiers can achieve good accuracy even when the training datasets are tiny making them useful for exploratory compound selection in drug design EPs can serve as opportunities in opportunity focused boosting and are useful for constructing powerful conditional ensembles EP based methods often produce interpretable models and results In general EPs are useful for classification clustering outlier detection gene ranking for complex diseases prediction model analysis and improvement and so on EPs are useful for many tasks because they represent group differences which have extraordinary power Moreover EPs represent multi factor interactions whose effective handling is of vital importance and is a major challenge in many disciplines Based on the results presented in this book one can clearly say that patterns are useful especially when they are linked to issues of interest We believe that many effective ways to exploit group differences power still remain to be discovered Hopefully this book will inspire readers to discover such new ways besides showing them existing ways to solve various challenging problems

Web 2.0 and Beyond Paul Anderson,2016-04-19 Web 2 0 and

Beyond Principles and Technologies draws on the author's iceberg model of Web 2.0 which places the social Web at the tip of the iceberg underpinned by a framework of technologies and ideas. The author incorporates research from a range of areas including business, economics, information science, law, media studies, psychology, social informatics, and sociology. This multidisciplinary perspective illustrates not only the wide implications of computing but also how other areas interpret what computer science is doing. After an introductory chapter, the book is divided into three sections. The first one discusses the underlying ideas and principles including user-generated content, the architecture of participation data on an epic scale, harnessing the power of the crowd, openness, and the network effect, and Web topology. The second section chronologically covers the main types of Web 2.0 services: blogs, wikis, social networks, media sharing sites, social bookmarking, and microblogging. Each chapter in this section looks at how the service is used, how it was developed, and the technology involved, important research themes, and findings from the literature. The final section presents the technologies and standards that underpin the operation of Web 2.0 and goes beyond this to explore such topics as the Semantic Web, cloud computing, and Web Science. Suitable for nonexperts, students, and computer scientists, this book provides an accessible and engaging explanation of Web 2.0 and its wider context, yet is still grounded in the rigour of computer science. It takes readers through all aspects of Web 2.0 from the development of technologies to current services.

Socio-Technical Networks Fei Hu, Ali Mostashari, Jiang Xie, 2010-11-17. While there are sporadic journal articles on socio-technical networks, there's long been a need for an integrated resource that addresses concrete socio-technical network (STN) design issues from algorithmic and engineering perspectives. Filling this need, *Socio-Technical Networks: Science and Engineering Design* provides a complete introduction to **Social Computing, Behavioral Modeling, and Prediction**. Huan Liu, John Salerno, Michael J. Young, 2008-01-24. Social computing concerns the study of social behavior and context based on computational systems. Behavioral modeling reproduces the social behavior and allows for experimenting with and deep understanding of behavior patterns and potential outcomes. The pervasive use of computer and Internet technologies provides an unprecedented environment where people can share opinions and experiences, offer suggestions and advice, debate, and even conduct experiments. Social computing facilitates behavioral modeling in model building, analysis, pattern mining, anticipation, and prediction. The proceedings from this interdisciplinary workshop provide a platform for researchers, practitioners, and graduate students from sociology, behavioral, and computer science, psychology, cultural study, information systems, and operations research to share results and develop new concepts and methodologies aimed at advancing and deepening our understanding of social and behavioral computing to aid critical decision making.

Data Mining Approaches for Big Data and Sentiment Analysis in Social Media Gupta, Brij B., Perakovi?, Dragan, Abd El-Latif, Ahmed A., Gupta, Deepak, 2021-12-31. Social media sites are constantly evolving with huge amounts of scattered data or big data, which makes it difficult for researchers to trace the information flow. It is a daunting task to extract a useful piece of information from the vast

unstructured big data the disorganized structure of social media contains data in various forms such as text and videos as well as huge real time data on which traditional analytical methods like statistical approaches fail miserably Due to this there is a need for efficient data mining techniques that can overcome the shortcomings of the traditional approaches Data Mining Approaches for Big Data and Sentiment Analysis in Social Media encourages researchers to explore the key concepts of data mining such as how they can be utilized on online social media platforms and provides advances on data mining for big data and sentiment analysis in online social media as well as future research directions Covering a range of concepts from machine learning methods to data mining for big data analytics this book is ideal for graduate students academicians faculty members scientists researchers data analysts social media analysts managers and software developers who are seeking to learn and carry out research in the area of data mining for big data and sentiment *A Model-based Approach for Distributed Data Mining* Xiaofeng Zhang,2007
