Pangea

Alfred Wegener and the Theory of Continental Drift

In the early 1900s, a German scientist named Alfred Wegener came up with an idea that changed the way we think about Earth. Wegener noticed that if you look closely at a world map, some continents seem like they could fit together like pieces of a puzzle. For example, the east coast of South America and the west coast of Africa look like they could join up. Wegener believed that the continents we see today weren't always in these positions—they used to be connected in one huge landmass!

Wegener called this giant landmass Pangea, which means "all lands" in Greek. According to Wegener, Pangea began to split apart around 200 million years ago. This splitting up didn't happen all at once. Instead, it was a slow process that took millions of years. As Pangea broke apart, it eventually formed the continents we know today. This movement and splitting of land became known as continental drift.

The Breaking Apart of Pangea

Wegener's theory suggested that Pangea split into two big pieces called Laurasia and Gondwana. Laurasia made up the northern continents, like what we now know as North America, Europe, and parts of Asia. Gondwana was the southern part, including today's South America, Africa, Antarctica, Australia, and more. Over millions of years, these continents continued to move apart, eventually forming the continents and oceans we have today.

Evidence Supporting Wegener's Theory

Wegener found more than just the puzzle-like fit of continents. He looked at rocks, fossils, and even ancient plants to back up his theory. For example:

- **Fossils:** In parts of South America and Africa, scientists have found fossils of the same ancient animals and plants. These species couldn't have swum across the ocean, so finding them on different continents suggests that the continents were once joined.
- **Rock Formations:** Similar mountain ranges are found in parts of North America and Europe, as well as South Africa and Brazil. These matching mountain ranges could have formed when the continents were together in Pangea.

Today, we understand that Earth's surface is made up of plates that move very slowly, carrying the continents with them. Wegener didn't have all the technology and knowledge we have now, but his theory laid the groundwork for what we call plate tectonics—the study of how Earth's plates move and shape the world.

Understanding Pangea: A Supercontinent

Pangea was a supercontinent that existed around 200 million years ago. It was once connected as a single, massive landmass. Each continent, like Africa, the Americas, Europe, and Asia, was part of this giant supercontinent. Over millions of years, Pangea gradually broke apart, eventually forming the separate continents we see today.

Fossil Evidence Key

Symbol	Fossil Name	Image

⊙	Continents	
⊕	Supercontinent	
⊖	Oceans	

Activity: Trading Fossil Clues

Objective: To understand how continents were once connected and how fossil evidence supports the idea of a supercontinent.

Instructions:

- Look at each shaded area on the map where fossils are located.
- In each shaded area, draw the symbol that matches the fossil found there.
- Spread the symbols across the shaded area to show the distribution of each fossil on the continents.
