structures developed exclusively for functional languages All source code is given in Standard ML and Haskell and most of the programs can easily be adapted to other functional languages This handy reference for professional programmers working with functional languages can also be used as a tutorial or for self study **Mathematical Foundations of Computer Science 1996** Wojciech Penczek,Andrzej Szalas,1996-08-07 This book constitutes the refereed proceedings of the 21st International Symposium on Mathematical Foundations of Computer Science MFCS 96 held in Crakow Poland in September 1996 The volume presents 35 revised full papers selected from a total of 95 submissions together with 8 invited papers and 2 abstracts of invited talks The papers included cover issues from the whole area of theoretical computer science with a certain emphasis on mathematical and logical foundations The 10 invited presentations are of particular value

Pitts,1992 Following Milner and Tofte 9 the method of proof is called co induction It closely resembles the way bisimulations are used in concurrent process calculi 8 Two specific instances of the co induction principle already occur in work of Abramsky 1 2 in the form of internal full abstraction theorems for denotational semantics of SCCS and the lazy lambda calculus In the first case post fixed binary relations are precisely Abramsky s partial bisimulations whereas in the second case they are his applicative bisimulations The co induction principle also provides an apparently useful tool for reasoning about equality of elements of recursively defined datatypes in strict or lazy higher order functional programming languages *Syn* Richard Boulton,1996 Abstract A language called Syn is described in which all aspects of context free syntax can be specified without redundancy The language is essentially an extended BNF grammar Unusual features include high level constructs for specifying lexical aspects of a language and specification of precedence by textual order A system has been implemented for generating lexers parsers pretty printers and abstract syntax tree representations from a Syn specification **Functional and Logic Programming** ,1999 *Programming Languages and Systems* ,1994 **Models, Algebras and Logic of Engineering Software** M.
