

POGIL Evidence for Evolution; How are DNA and comparative anatomy used to show relatedness? 2024 Update with complete solution

Why?

Evidence for Evolution

How are DNA and comparative anatomy used to show relatedness?

"You look just like your mother!" "He has his father's eyes." These comments that refer to the similarities between parents and their children are heard often in conversation. These similar traits are due to the genetic material that children inherit from their parents. As humans we are sometimes fortunate enough to have three or four generations sitting in a room at one time, and we can see the similarities from generation to generation. But how much do you look like your ancestors from 100 generations ago, 1000 generations ago or more? How much of your DNA did you inherit from those ancestors? What traits do you share with them?

Model 1 - Family Characteristics

1. Model 1 is a family tree. Circle the original parents of the family.
2. How would you describe the organisms in the second row of Model 1 that are connected to the parents by a line?
I would describe the organisms in the second row of Model 1 that are connected to the parents by a line as their offspring of the first line.
3. Identify the three members of the family that "married in" by placing a star next to their figures in Model 1.
4. How are the organisms in the third line related to the organisms in the first line?

The organisms in the third line are related to the organisms in the first line as they are their grandchildren.

Trends in Teaching Experimentation in the Life Sciences Nancy J. Pelaez, Stephanie M. Gardner, Trevor R. Anderson, 2022-05-11 This book is a guide for educators on how to develop and evaluate evidence based strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific

competencies that unpack what it means to be a competent experimental life scientist. It includes explicit evidence-based guidelines for educators regarding the teaching, learning, and assessment of biological research competencies. The book also provides practical teacher guides and exemplars of assignments and assessments. It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain. This book contributes to the growth of public understanding of biological issues, including scientific literacy and the crucial importance of evidence-based decision making around public policy. It will be beneficial to life science instructors, biology education researchers, and science administrators who aim to improve teaching in life science departments. Chapters 6, 12, 14, and 22 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

[Standards-Based AI Innovation for the Learning Ecosystem](#) Andres, Frederic, Racharak, Teeradaj, Weger, Gerlinde, Pester, Andreas, Anantaram, Chandrasekhar, 2025-12-30. Standards-based AI innovation transforms the learning ecosystem, offering new opportunities to enhance educational quality, accessibility, and personalization. By developing and applying frameworks and ethical guidelines, institutions ensure AI technologies in education are transparent, equitable, and aligned with learning goals. These standards build trust among educators, students, and policymakers while supporting diverse learning environments. As AI becomes more integrated into teaching, assessment, and administration, a standards-driven approach guides responsible innovation and increases the positive impact on global learners. [Standards-Based AI Innovation for the Learning Ecosystem](#) explores the transformative potential of educational policy and standards in shaping the future of AI-driven education and training. It examines how adherence to standards enhances trust, accountability, and effectiveness in AI-powered educational tools. This book covers topics such as data science, ethics, and law and inclusive education and is a useful resource for educators, policymakers, engineers, academicians, researchers, and scientists.

[Faculty Development on a Shoestring](#) Diane D. Chapman, Michelle E. Bartlett, 2024-03-13. This book addresses the needs of faculty at institutions with limited resources for professional development. Written by experts from the US and Europe, it shares low-cost programs with proven outcomes. Each chapter provides details for implementation and evaluation, aiming to level the playing field in faculty development.

[Relics of Eden](#) Daniel J. Fairbanks, 2009-09-18. Since the publication in 1859 of Darwin's *Origin of Species*, the debate over the theory of evolution has been continuous and often impassioned. In recent years, opponents of Darwin's dangerous idea have mounted history's most sophisticated and generously funded attack, claiming that evolution is a theory in crisis. Ironically, these claims are being made at a time when the explosion of information from genome projects has revealed the most compelling and overwhelming evidence of evolution ever discovered. Much of the latest evidence of human evolution comes not from our genes but from so-called junk DNA, leftover relics of our evolutionary history that make up the vast majority of our DNA. [Relics of Eden](#) explores this powerful DNA-based evidence of human evolution. The relics are the millions of functionally useless but scientifically informative remnants of our evolutionary ancestry trapped in the DNA of every person on the planet.

For example the analysis of the chimpanzee and Rhesus monkey genomes shows indisputable evidence of the human evolutionary relationship with other primates Over 95 percent of our genome is identical with that of chimpanzees and we also have a good deal in common with other animal species Author Daniel J Fairbanks also discusses what DNA analysis reveals about where humans originated The diversity of DNA sequences repeatedly confirms the archeological evidence that humans originated in sub Saharan Africa the Eden of the title and from there migrated through the Middle East and Asia to Europe Australia and the Americas In conclusion Fairbanks confronts the supposed dichotomy between evolution and religion arguing that both science and religion are complementary ways to seek truth He appeals to the vast majority of Americans who hold religious convictions not to be fooled by the pseudoscience of Creationists and Intelligent Design advocates and to abandon the false dichotomy between religion and real science This concise very readable presentation of recent genetic research is completely accessible to the nonspecialist and makes for enlightening and fascinating reading
