

## Short Answer Questions

**Q.1.** Geography is the art and science of describing the Earth. Justify.

**Ans.** Geography as a discipline is concerned with three sets of questions:-

1. some questions are concerned with the identification of the patterns of natural and cultural features as found over the surface of the earth. These are the questions about what?
2. where? few questions are related to the distribution, of the natural and human features over the Surface of the earth. These are questions about where.

But these two questions do not make geography a scientific discipline. It is the third question, which is related to the explanation of the casual relationships between features and the processes that makes geography a scientific subject. Thus geography is both art and science of studying earth.

**Q.2.** Explain different branches of Physical geography.

**Ans.** It has four sub-branches which are as follows:

- **Geomorphology:** It is concerned with the study of landforms, their evolution and related processes.
- **Climatology:** It is concerned with the study of structure of atmosphere and elements of weather and climates and climatic types and regions.
- **Hydrology:** It studies the realm of water over the surface of the earth including oceans, lakes, rivers and other water bodies and its effect on different life forms including human life and their activities.
- **Soil Geography:** Studies the study of the processes of soil formation, soil types, their fertility status, distribution and use.
