

Kidney Dissection

Objective: Students will identify and describe the external and internal structures of the kidney through hands-on dissection and relate each structure to its role in the excretory system.

External Kidney Anatomy

Internal Kidney Anatomy

BACKGROUND INFORMATION

The kidneys are part of the body's **excretory system**. These bean-shaped organs **filter blood to remove waste**, regulate fluid and electrolyte balance, and help maintain blood pressure. Each kidney contains over a million tiny filtering units called **nephrons**. Blood enters the kidney through the **renal artery**, is filtered in the **cortex and medulla**, and exits through the **renal vein**. The waste collected forms urine, which drains through the **renal pelvis** into the **ureter** and then to the bladder.

During this lab, you'll examine the external and internal structures of a preserved kidney to better understand how its structure supports its function.

Kidney Excretion Answer Key
