Geometric Structures of Statistical Physics, Information Geometry, and Learning Frédéric Barbaresco, Frank Nielsen, 2021-06-27 Machine learning and artificial intelligence increasingly use methodological tools rooted in statistical physics Conversely limitations and pitfalls encountered in AI question the very foundations of statistical physics This interplay between AI and statistical physics has been attested since the birth of AI and principles underpinning statistical physics can shed new light on the conceptual basis of AI During the last fifty years statistical physics has been investigated through new geometric structures allowing covariant formalization of the thermodynamics Inference methods in machine learning have begun to adapt these new geometric structures to process data in more abstract representation spaces This volume collects selected contributions on the interplay of statistical physics and artificial intelligence The aim is to provide a constructive dialogue around a common foundation to allow the establishment of new principles and laws governing these two disciplines in a unified manner The contributions were presented at the workshop on the Joint Structures and Common Foundation of

Statistical Physics Information Geometry and Inference for Learning which was held in Les Houches in July 2020 The various theoretical approaches are discussed in the context of potential applications in cognitive systems machine learning signal processing

Elements of Parallel Computing Eric Aubanel,2016-12-08 Designed for introductory parallel computing courses at the advanced undergraduate or beginning graduate level Elements of Parallel Computing presents the fundamental concepts of parallel computing not from the point of view of hardware but from a more abstract view of algorithmic and implementation patterns The aim is to facilitate the teaching of parallel programming by surveying some key algorithmic structures and programming models together with an abstract representation of the underlying hardware The presentation is friendly and informal The content of the book is language neutral using pseudocode that represents common programming language models The first five chapters present core concepts in parallel computing SIMD shared memory and distributed memory machine models are covered along with a brief discussion of what their execution models look like The book also discusses decomposition as a fundamental activity in parallel algorithmic design starting with a naive example and continuing with a discussion of some key algorithmic structures Important programming models are presented in depth as well as important concepts of performance analysis including work depth analysis of task graphs communication analysis of distributed memory algorithms key performance metrics and a discussion of barriers to obtaining good performance The second part of the book presents three case studies that reinforce the concepts of the earlier chapters One feature of these chapters is to contrast different solutions to the same problem using select problems that aren't discussed frequently in parallel computing textbooks They include the Single Source Shortest Path Problem the Eikonal equation and a classical computational geometry problem computation of the two dimensional convex hull After presenting the problem and sequential algorithms each chapter first discusses the sources of parallelism then surveys parallel algorithms
