Symmetries and Recursion Operators for Classical and Supersymmetric Differential Equations I.S. Krasil'shchik, P.H. Kersten, 2013-03-14 To our wives Masha and Marian Interest in the so called completely integrable systems with infinite number of degrees of freedom was aroused immediately after publication of the famous series of papers by Gardner Greene Kruskal Miura and Zabusky 75 77 96 18 66 19J see also 76 on striking properties of the Korteweg de Vries KdV equation It soon became clear that systems of such a kind possess a number of characteristic properties such as infinite series of symmetries and or conservation laws inverse scattering problem formulation L A pair representation existence of prolongation structures etc And though no satisfactory definition of complete integrability was yet invented a need of testing a particular system for these properties appeared Probably one of the most efficient tests of this kind was first proposed by Lenard 19 who constructed a recursion operator for symmetries of the KdV equation It was a strange operator in a sense being formally integro differential its action on the first classical symmetry x translation was well defined and produced the entire series of higher KdV equations but applied to the scaling symmetry it gave expressions containing terms of the type $\int u dx$ which had no adequate interpretation in the framework of the existing theories It is not surprising that P Olver wrote The deduction of the form of the recursion operator if it exists requires a certain amount of inspired guesswork 80 p
