Credits: 0.5

## Course Overview and Goals

Geometry is a branch of mathematics that uses logic and formal thinking to establish relationships among points, lines, angles, plane figures, and solids, as well as define their properties. In Geometry, Semester B, you will explore right triangles, trigonometry, and properties of circles and apply geometric concepts to probability. You will also investigate and measure surface area and volume of geometric solids, applying what you learn to model and solve real-world problems.

By the end of this course, you will be able to do the following:

- ❖ Prove the converse of the Pythagorean theorem and the laws of sines and cosines.
- ❖ Prove and apply circle properties and relationships.
- ❖ Construct inscribed and circumscribed circles and tangent lines.
- ❖ Derive the equation of a circle or parabola on the coordinate plane.
- ❖ Measure and describe plane and solid figures using perimeter, area, surface area, and volume.
- ❖ Calculate probabilities and apply probability concepts to establish independence and make decisions.
- ❖ Apply geometric and trigonometric concepts to solve real-world and mathematical problems.

## Scope and Sequence

This document outlines the design of Geometry, Semester B, as well as the coverage of the Common Core State Standards within the course.
