Florida's Natural Resources

The image displays a collection of educational resources for 4th grade science. On the left, a laptop screen shows a website with a grid of images and text. In the center, a worksheet titled 'Save Water' features a drawing of a bucket of water and the instruction 'Check the water.' To the right, a larger worksheet titled 'Florida's Natural Resources' includes a section for 'Natural Resources Energy Unit'. This section contains a paragraph defining natural resources and distinguishing between renewable and non-renewable resources. It lists examples of non-renewable resources (fossil fuels, phosphate) and renewable resources (wind, solar, geothermal). A sub-section titled 'Fossil Fuel' explains that fossil fuels are non-renewable and formed from ancient organic matter. A green arrow points to the code 'SC.4.E.6.6' on the right side of the worksheet.

Florida's Natural Resources

Put a check mark in the box if the statement is true and put a cross mark if the statement is false.

- Natural resources are substances that occur without the assistance of humans.
- We can use water over and over again because it is a renewable resource.
- Coal energy is a type of renewable resource because it can be replaced by other natural resources.
- Fossil fuels are a type of non-renewable resource because they take millions of years to form.
- Some water is made of hydrogen and oxygen.

Natural Resources Energy Unit

Natural resources are all around us. Natural resources are materials or substances that occur without the assistance of humans. These resources are essential for survival as they can be used for economic gain. In addition, they provide thousands of jobs for people. Many of these resources are used up before we can use them again, so we classify them as non-renewable. Examples of non-renewable resources are fossil fuels, phosphate and some natural resources we use are considered renewable, meaning we can use them again. Examples of renewable resources are wind and solar energy. There are many ways to classify or study natural resources. These resources that provide us with energy.

Fossil Fuel

Using them for transportation is a convenient and quick way to travel. It is not so easy to go. Most cars only use gasoline to power them. The gas produced from fossil fuels. Fossil fuels are a type of non-renewable resource.

There are three types of fossil fuels: coal, oil, and natural gas. Coal is a solid fossil fuel. It is made from the remains of plants that lived millions of years ago. Oil is a liquid fossil fuel. It is made from the remains of animals that lived millions of years ago. Natural gas is a gas fossil fuel. It is made from the remains of plants and animals that lived millions of years ago. The burning of fossil fuels causes a lot of harm to our environment. The burning of fossil fuels causes a lot of air pollution. One of the negative impacts of fossil fuels is global warming. Global warming is the increase in the average temperature of the Earth's atmosphere. This is caused by the greenhouse effect. Greenhouse gases, such as carbon dioxide, trap heat in the atmosphere. This causes the Earth's temperature to rise. This can lead to more frequent and severe weather events, such as hurricanes and droughts. The burning of fossil fuels also causes acid rain. Acid rain is caused by the release of sulfur dioxide and nitrogen oxides into the atmosphere. These gases combine with water vapor to form sulfuric acid and nitric acid. These acids fall to the ground as rain or snow. Acid rain can damage buildings, trees, and other structures. It can also harm people and animals. The burning of fossil fuels also causes air pollution. Air pollution is caused by the release of pollutants into the atmosphere. These pollutants can be harmful to people and animals. Air pollution can cause respiratory problems, such as asthma and bronchitis. It can also cause other health problems, such as heart disease and cancer. The burning of fossil fuels also causes water pollution. Water pollution is caused by the release of pollutants into water bodies. These pollutants can be harmful to people and animals. Water pollution can cause other health problems, such as skin irritation and respiratory problems. It can also harm the environment. Water pollution can cause the death of fish and other aquatic life. It can also cause other environmental problems, such as the depletion of oxygen in the water.
