

INSTRUCTIONS:

1. Locate the segments to add on the outer edge of the timer dial. If these segments, each representing 30 minutes, can be pushed down from the edge of the dial by using the tip of a pen or pencil. Conversely, segments that have been pushed down can be easily pushed back up by hand. Be sure all segments are pushed up before programming. Select a time period for periodic operations: the lamp is turned on, then pushed down at the segment that falls on or within that time period. For example, to have the timer turn a lamp on at 10PM and off at 2AM, push down the segments representing 10PM and 2AM, and fill in the segments in between (See Figure 1 & 2). You may need to turn the dial clockwise to recess the desired segments.
2. Rotate the timer dial clockwise until the pointer on the face of the dial points to the current time of day. Note: Nighttime hours (from 6:00 PM to 6:00 AM) are highlighted with a black banding to aid.
3. See master switch to the OFF/ON position. See Figure 3.
4. Plug the timer into an electrical outlet, convenient to the lamp you are controlling.
5. Plug the lamp into the outlet on the side of the timer. Turn the lamp plug clockwise for an on-time or counterclockwise for an off-time. The timer will not turn on the lamp if the lamp switch is off. The lamp will now turn on and off as the timer you have set.

NOTE: To operate the timer and use your lamp correctly, see the master switch to the OFF/ON position. The unit displays the timer's control of the lamp, but the timer dial will still show the current time of day. To re-adjust the timer's control of the lamp, turn the lamp switch on and see the timer's master switch to OFF/ON. In case of power failure, reset the time of day as explained in step 2.

DO NOT PLUG IN MORE THAN THE RATED LOAD ORS SAFETY. To find wattages being used if waxes are not marked on the appliance, multiply ampere rating (on the receptacle) by 120 volts to determine equivalent watts. For lamps use the wattage label, same voltage as bulb.

If this is a POLARIZED device, it has a polarized plug (one blade is wider than the other) and a polarized outlet (one slot is longer than the other). The polarized plug is not intended to be inserted into non-polarized outlets (having both slots of the same size). A polarized outlet is needed so that a polarized plug can only one way — the longer slot with the wider blade.
