

Digestion

Every time you eat a meal, your body begins an amazing process called digestion. Digestion is the way your body breaks down food into smaller parts so that it can absorb nutrients and get energy. It involves many organs, enzymes, and muscle movements that all work together.

🌿 What Is Digestion?

Digestion is the process of breaking down food into nutrients that the body can use for energy, growth, and repair. It begins in the mouth and ends in the large intestine. Digestion involves both mechanical processes (like chewing and muscle movement) and chemical processes (like enzymes and stomach acids).

👄 Step 1: The Mouth

Digestion starts when you put food in your mouth. Your teeth chew the food into smaller pieces—this is mechanical digestion. Meanwhile, your saliva contains enzymes that begin chemical digestion by breaking down starches.

👅 Step 2: Swallowing and the Esophagus

Once the food is chewed, it becomes a soft mass called a bolus. The tongue pushes the bolus to the back of the mouth, and it travels down the esophagus—a muscular tube that connects the mouth to the stomach—using a movement called peristalsis.

🍷 Step 3: The Stomach

In the stomach, the food is mixed with gastric juices that contain enzymes and hydrochloric acid. These break down proteins and kill harmful bacteria. The food becomes a thick liquid called chyme.

👃 Step 4: The Small Intestine

Most digestion and nutrient absorption happens in the small intestine. Enzymes from the pancreas and bile from the liver help break down fats, carbohydrates, and proteins. The tiny finger-like structures called villi absorb nutrients into the bloodstream.

👃 Step 5: The Large Intestine

What's left over moves into the large intestine, where water is absorbed and the waste becomes solid. The waste is then stored in the rectum and eventually leaves the body through the anus.

⚡ Why Is Digestion Important?

Without digestion, your body wouldn't be able to absorb the nutrients it needs. Digestion provides the energy you use to move, think, and grow. It also keeps your body healthy by removing waste and fighting off harmful bacteria.
