anus - the opening at the end of the digestive system from which feces exit the body.

appendix - a small sac located near the start of the large intestine.

esophagus - the long tube between the mouth and the stomach. It uses rhythmic muscle movements (called peristalsis) to force food from the throat into the stomach.

gall bladder - a small, sac-like organ located by the duodenum. It stores and releases bile (a digestive chemical which is produced in the liver) into the small intestine.

rectum - the lower part of the large intestine, where feces are stored before they are excreted from the body.

small intestine - the long, thin winding tube that food goes through after it leaves the stomach.
