

- Features:**
- Work with all 12V OBD II compliant vehicles
 - OBD live data recording
 - Plug and play, user friendly
 - Support data synchronization and review on either of the following products of Matco family:

Maximus 3.0

MaxFile

How to Use Maxdrive?

1. Turn the ignition key OFF.
2. Locate the vehicle's DLC.

The DLC(Data Link Connector) is typically a 16-pin connector where VCI dongle interfaces with the vehicle's on-board computer. It is usually located on driver's side, about 12 inches away from the center of dashboard.

In case no DLC is found, please refer to Automobile Repair Manual.
3. Plug the Maxdrive dongle into the vehicle's DLC directly. Normally the LED indicator of the dongle will illuminate solid red.
4. Turn the ignition key START. When the LED illuminates blue, the dongle starts reading vehicle information and recording the vehicle data of driving segments.

***Note:**

- While reading vehicle information, if the LED changes into solid blue from red, it indicates that the vehicle VIN has been successfully identified. In case the dongle fails to identify the vehicle VIN, the LED will remain solid red.
- The time for reading the vehicle information varies from vehicle to vehicle and generally is less than 3 minutes.

Caution: Randomly plugging and unplugging the Maxdrive dongle during driving is prohibited. This may generate a potential risk to driving safety.

5. After recording, use the Maximus 3.0 or MaxFile tablet to synchronize/read the recorded data.

The following methods are available for data synchronization:

Method 1(recommended for Maximus 3.0): Power on the docking station, and then insert the dongle on the OBD II socket of the docking station. The dongle is powered up and starts reading the vehicle information. After the LED illuminates solid red, start the data synchronization.

If no records are detected, the LED on the dongle will illuminate red and flash.

Method 2(recommended for MaxFile): Make sure that the dongle always remains plugged, keep the vehicle idle and pull the handbrake and then perform the data synchronization.

***Note:** If you unplugged the dongle from the vehicle's DLC after recording, re-plug the dongle on the **same** vehicle, and turn the ignition key ON with **engine OFF** (Once the engine starts, a new empty record will be created on the dongle). Wait for 2-3 minutes until the dongle successfully reads the vehicle information, then perform the data synchronization.

6. After synchronizing the Maxdrive data, you are strongly suggested to delete the data that has been backed up to avoid repeated synchronization in the future.
