

3. Service Brake Pedal

The air brakes are controlled by the brake pedal. Press the pedal down to apply the brakes. Release the pedal to release the brakes.

Air Brake Operation

The distance the service brake pedal is moved regulates the amount of air delivered to the brake chambers, which determines the braking force.

The smoothest stop results when the brake application is as fast as fast as crane speed and road conditions will permit. Then gradually release the pedal as crane speed decreases. As the crane stop is completed, the brake application should only be enough to hold the crane stationary. A rough stop will occur if the application is light at first and increased as crane speed decreases.

Do not fan the service brake pedal. This wastes compressed air and increases stopping distance. Depress the pedal fully only in cases of emergency or the motor control of the crane offload.

If the air system pressure drops below the normal operating range of 100–120 psi (6.9–8.3 bar), stop the crane and repair the problem. As the air system pressure decreases below 60 psi (4.1 bar), the park brake will automatically engage to stop.

4. Tie/Telescope Lever

This lever controls the tie (angle) and telescope function of the steering wheel. To change steering wheel tie angle/telescope:

1. Bring the crane to a complete stop.
2. Engage the park brake and chock the tires on the rear.

3. To change the steering wheel angle, pull the telescopic control lever toward the steering wheel and front. Position the steering wheel at the desired angle and release the lever.
4. To change the steering column length, push the telescopic control lever away from the steering wheel and front. Position the steering column at the desired length and release the lever.
5. Check all steering wheel functions before continuing operation.

5. Hazard Flasher Switch

This switch controls the hazard warning flashers. Press the switch to turn the flashers on. Push the switch again to turn the flashers off.

6. Turn Signal Lever

The turn signal lever controls the following functions:

1. Turn Signal: Push the lever down for left turn signal, pull the lever up for right turn signal.
2. Headlight Beam Control: Pull the lever toward the steering wheel to change to high beam headlights. Push the lever toward the steering wheel again to return to low beam headlights.
3. Windshield Wiper: Rotate the turn signal lever counterclockwise to activate the windshield wiper. Rotate the lever counterclockwise to the first through fifth detent for intermittent wiper and to the sixth detent for low speed wiper. To the seventh detent for high speed wiper. Rotate fully clockwise to turn wiper off.
4. Windshield Washer: Push in on the end of the lever to spray washer fluid onto the windshield.

7. Steering Wheel

Turn the steering wheel clockwise for right turn and counterclockwise for left turn.

Figure 1-40
Main Pump Controls

Main Pump Controls

The main pump is used to supply hydraulic power to the upper. Engage the main pump before performing crane operations. Refer to Figure 1-40.

To Engage The Main Pump

1. Properly start the engine. Allow air pressure to build to normal operating range of 100–120 psi (6.9–8.3 bar).

2. Move the pump engagement/brake selector switch in the center cab to the "Pump/Upper" position.

Note: If the pump engagement/brake selector switch in the center cab is moved to the "Pump/Upper" position before sufficient air pressure is obtained, the low air indicator light on the Crane Control Display in the upper operator's cab will illuminate and an audible alarm will sound in the upper cab. When the light and alarm extinguish, there is sufficient air pressure to engage the pump. At this point, press the bottom part of the pump enable switch and release (this is a momentary switch). This will engage the main pump.

When operating from the upper operator's cab and the pump engagement/brake selector switch is in the "Pump/Upper" position, maximum engine rpm is reduced to 1800. This is a precaution to prevent over-speeding of the pumps.

To Disengage The Main Pump

1. Move the pump engagement/brake selector switch in the center cab to the "Lower" position.
