Human Language Technology. Challenges of the Information Society Zygmunt Vetulani, Hans Uszkoreit, 2009-08-25 Half a century ago not many people had realized that a new epoch in the history of homo

sapiens had just started The term Information Society Age seems an appropriate name for this epoch Communication was without a doubt a lever of the conquest of the human race over the rest of the animate world There is little doubt that the human race began when our predecessors started to communicate with each other using language This highly abstract means of communication was probably one of the major factors contributing to the evolutionary success of the human race within the animal world Physically weak and imperfect humans started to dominate the rest of the world through the creation of communication based societies where individuals communicated initially to satisfy immediate needs and then to create accumulate and process knowledge for future use The crucial step in the history of humanity was the invention of writing It is worth noting that writing is a human invention not a phenomenon resulting from natural evolution Humans invented writing as a technique for recording speech as well as for storing and facilitating the dissemination of knowledge across the world Humans continue to be born illiterate and therefore teaching and conscious supervised learning is necessary to maintain this basic social skill
