Materials for Energy Efficiency and Thermal Comfort in Buildings Matthew R Hall, 2010-04-21 Almost half of the total energy produced in the developed world is inefficiently used to heat cool ventilate and control humidity in buildings to meet the increasingly high thermal comfort levels demanded by occupants The utilisation of advanced materials and passive technologies in buildings would substantially reduce the energy demand and improve the environmental impact and carbon footprint of building stock worldwide *Materials for energy efficiency and thermal comfort in buildings* critically reviews the advanced building materials applicable for improving the built environment Part one reviews both fundamental building physics and occupant comfort in buildings from heat and mass transport hygrothermal behaviour and ventilation on to thermal comfort and health and safety requirements Part two details the development of advanced materials and sustainable technologies for application in buildings beginning with a review of lifecycle assessment and environmental profiling of materials The section moves on to review thermal insulation materials materials for heat and moisture control and heat energy storage and passive cooling technologies Part two concludes with coverage of modern methods of construction roofing design and technology and benchmarking of facades for optimised building thermal performance Finally Part three reviews the application of advanced materials design and technologies in a range of existing and new building types including domestic commercial and high performance buildings and buildings in hot and tropical climates This book is of particular use to mechanical electrical and HVAC engineers architects and low energy building practitioners worldwide as well as to academics and researchers in the fields of building physics civil and building engineering and materials science Explores improving energy efficiency and thermal comfort through material selection and sustainable technologies Documents the development of advanced materials and sustainable technologies for applications in building design and construction Examines fundamental building physics and occupant comfort in buildings featuring heat and mass transport hygrothermal behaviour and ventilation

Temperature and Humidity Independent Control (THIC) of Air-conditioning System Xiaohua Liu, Yi Jiang, Tao Zhang, 2014-01-16 Temperature and Humidity Independent Control THIC of Air conditioning System focuses on temperature and humidity independent control THIC systems which represents a new concept and new approach for indoor environmental control This book presents the main components of the THIC systems including dehumidification devices high temperature cooling devices and indoor terminal devices Other relevant issues such as operation and control strategy and case studies are also included This book is intended for air conditioning system designers and engineers as well as researchers working with indoor environments Xiaohua Liu is an associate professor at the Building Energy Research Center Tsinghua University China Yi Jiang is a member of the Chinese Academy of Engineering the director of the Building Energy Research Center Tsinghua University China and the director of the China USA Joint Research Center on Clean Energy Tao Zhang is a Ph D candidate at the Building Energy Research Center Tsinghua University China

Handbook of Thermal Management Systems Fethi Aloui, Edwin Geo Varuvel, Ankit Sonthalia, 2023-08-24 Handbook of Thermal Management Systems e Mobility and Other Energy Applications is a comprehensive reference on the thermal management of key renewable energy sources and other electronic components With an emphasis on practical applications the book addresses thermal management systems of batteries fuel cells solar panels electric motors as well as a range of other electronic devices that are crucial for the development of sustainable transport systems Chapters provide a basic understanding of the thermodynamics behind the development of a thermal management system update on Batteries Fuel Cells Solar Panels and Other Electronics provide a detailed description of components and discuss fundamentals Dedicated chapters then systematically examine the heating cooling and phase changes of each system supported by numerical analyses simulations and experimental data These chapters include discussion of the latest technologies and methods and practical guidance on their application in real world system level projects as well as case studies from engineering systems that are currently in operation Finally next generation technologies and methods are discussed and considered Presents a comprehensive overview of thermal management systems for modern electronic technologies related to energy production storage and sustainable transportation Addresses the main bottlenecks in the technology development for future green and sustainable transportation systems Focuses on the practical aspects and implementation of thermal management systems through industrial case studies real world examples and solutions to key problems *Solar Thermal Systems and Applications* Mohsen Sheikholeslami, 2024-05-28 *Solar Thermal Systems and Applications* New Design Techniques for Improved Thermal Performance brings together the latest advances for the improved performance efficiency and integration of solar thermal energy STE technology The book begins by introducing solar energy and solar thermal energy as a viable option in terms of green energy for industrial commercial and residential applications as well as its role and potential within hybrid energy systems This is followed by detailed chapters that focus on key innovations in solar thermal energy systems covering novel approaches and techniques in areas such as flat plate solar collectors modified evacuated tube solar collectors solar parabolic trough collectors linear Fresnel reflectors photovoltaic thermal systems phase change materials nanotechnology combined PVT PCM systems solar thermal systems and Trombe wall design solar still units and solar dish systems Throughout the book the coverage is supported by experimental and numerical modelling methods and techniques are discussed and assessed with a view to improved electrical and thermal efficiency and performance This is a valuable resource for researchers and advanced students in solar energy thermal engineering hybrid energy systems renewable energy mechanical engineering nanotechnology and materials science This is also of interest to engineers R D professionals scientists and policy makers with an interest in solar thermal energy STE in an industrial residential or commercial setting Introduces solar thermal energy STE and details the current state and future opportunities Reviews and analyzes the latest advances in solar thermal energy technology design methods and applications Covers in detail the role of phase change
