Calculus Study Guide, Solutions to Problems from Past Tests and Exams Sergio Da Silva, Joshua Seaton, 2015-08-09 Written by current PhD students in mathematics this calculus study guide contains detailed step by step solutions to problems from past tests and exams at the University of Toronto Based on the MAT 137 course this handbook was written with the student in mind While the problems originate from U of T the material is easily comparable to any introductory university calculus course that has a focus on proofs For a lighter approach see the MAT 135 136 guide After being teaching assistants for calculus courses over several years Joshua and Sergio found students constantly asking about solutions from other help manuals The solutions were either wrong or poorly explained They saw the need for a more comprehensive solution manual that explained every step in detail Before beginning their PhDs at Columbia and Cornell University respectively they wrote this study guide to better help students having difficulty with mathematics

A Guide to the Economic Removal of Metals from Aqueous Solutions Yogesh C. Sharma, 2012-01-10 Provides public health sanitary and water engineers baseline data for designing plants for the treatment of industrial effluents rich in the metallic species in general and that of nickel and chromium in particular Description Water pollution is a topic of immense and common concern throughout the world With a rapidly escalating global population and increased industrial development in a growing number of countries the world's freshwater resources have become stressed One way to get more out of less is treatment and reuse Nickel and chromium are toxic metals and they are used extensively in numerous industries such as textiles beverages steel pulp and paper and electroplating Their industrial effluent contains large measures of non biodegradable traces that are harmful to flora fauna and human beings Although there are a number of methodologies used for treatment of metal containing industrial effluents and waste water there is not one up to now that offers a high capacity removal rate at an economical cost This book presents the results and data from research and adsorption experiments carried out on the removal of nickel and chromium as well as other metals from aqueous solutions using modified silica sand The data resulting from detailed kinetic equilibrium and thermodynamic studies show that the removal capacity is increased so the treated water has a higher quality or purity It also demonstrates that the extraction of metals is achieved at a significant lower cost because the treated water adsorption is a simple process with less maintenance and because silica is a nontoxic natural material widely available in all parts of the world
