The human aspect plays an important role in the social sciences. The behaviour of people has become a vital area of focus in the social sciences as well. *Recent Trends in Social and Behaviour Sciences* contains papers that were originally presented at the International Congress on Interdisciplinary Behavior and Social Sciences held 4-5 November 2011. *The Oxford Handbook of the Sociology of Finance* Karin Knorr Cetina, Alex Preda, 2012-11-29
Recent years have seen a surge of interest in the workings of financial institutions and financial markets beyond the discipline of economics which has been accelerated by the financial crisis of the early twenty-first century. *The Oxford Handbook of the Sociology of Finance* brings together twenty-nine chapters written by scholars of international repute from Europe, North America, and Asia to provide comprehensive coverage on a variety of topics related to the role of finance in a globalized world and its historical development. Topics include global institutions of modern finance, types of actors involved in financial transactions and supporting technologies, mortgage markets, rating agencies, and the role of financial economics. Particular attention is given to financial crises which are discussed in a special section, as well as to alternative forms of finance including Islamic finance and the rise of China. The Handbook will be an indispensable tool for academics, researchers, and students of contemporary finance and economic sociology and will serve as a reference point for the expanding international community of scholars researching these areas from a broadly defined sociological perspective. **Artificial Intelligence and Information Technologies** Arvind Dagur, Dhirendra Kumar Shukla, Nazarov Fayzullo Makhmadiyarovich, Akhatov Akmal Rustamovich, Jabborov Jamol Sindorovich, 2024-07-31

Theories of Choice Stefan Grundmann, Philipp Hacker, 2021-01-14
Choice is a key concept of our time. It is a foundational mechanism for every legal order in societies that are politically

constituted as democracies and economically built on the market mechanism Thus choice can be understood as an atomic structure that grounds core societal processes In recent years however the debate over the right way to theorize choice for example as a rational or a behavioral type of decision making has intensified This collection provides an in depth discussion of the promises and perils of specific types of theories of choice It shows how the selection of a specific theory of choice can make a difference for concrete legal questions in particular in the regulation of the digital economy or in choosing between market firm or network In its first part the volume provides an accessible overview of the current debates about rational versus behavioral approaches to theories of choice The remainder of the book structures the vast landscape of theories of choice along with three main types individual collective and organizational decision making As theories of choice proliferate and become ever more sophisticated however the process of choosing an adequate theory of choice becomes increasingly intricate This volume addresses this selection problem for the various legal arenas in which individual organizational and collective decisions matter By drawing on economic technological political and legal points of view the volume shows which theories of choice are at the disposal of the legally relevant decision maker and how they can be operationalized for the solution of concrete legal problems The editors acknowledge the kind support of the Fritz Thyssen Foundation for an exploratory conference on the subject of the book
