

### Control valve with actuator

### Types of Motor Operated Valves

The motorized control valve can be classified into three types. However, it must be noted that the main application of motorized valves is for flow control and flow isolation.

#### Open/Close Valves: -

Used to automate manually open-close valves. Examples include pump discharge/suction valves, boiler feed water isolation valves, drum vent valves, product line valves, etc.

#### Inching Valves: -

Used where some degree of control is required. Applications include reflux lines, boiler start-up vents, boiler mainstream valves, etc.

#### Precision Flow Valves: -

In the inching valve, the motor operates in steps configured in the controller, e.g. 5%, 10% opening steps. In precision flow valves, continuous control is enabled by the use of proper feedback from the field to the controller which is not usually found in other motor-operated valves. An example includes steam injection valve/water injection valve etc.

#### Advantages & Disadvantages of Motorized Valves

Advantages	Disadvantages
1. Accurate & Reliable	1. Initial High cost
2. Fast Response	2. Need precise & accurate Motor to control valve's positions
3. Require less maintenance	
4. Can be used in hazardous locations where The human-operator approach is inaccessible.
