Here I'm discussing about the circuit that which we can use in different ways to produce signals. In this we are observing that there are two op-amps that are of ic741.

Signal generator which provide a variety of waveforms are referred to as unction generator. These are commonly available as test instruments. The variety of wave shapes provided generally determines the complexity and cost of the generator system. It facilitates such as voltage control of frequency and ability to provide a signal wave or group of wave.

Function generator system can be readily synthesized using operational amplifiers on approach which is use full when the need for a special purpose generator arises or when a function generator is inconvenient or prohibited by cost consideration.

The basic wave shapes produced by most function generators are square wave & triangular wave. These can be shaped by non
