Measuring Angles Performance Task

Susan Perry Gurganus

Measuring Angles Performance Task:

Performance Assessment Brian McLean Semple,1992 The second International Assessment of Educational Progress focused on the mathematics and science achievement of 13 year olds Performance assessments were used as part of the overall assessment in four countries England Scotland Soviet Union and Taiwan and five Canadian provinces The performance assessment approach drew heavily on the experience of the United Kingdom in such assessments but added features to meet the needs of an international study The performance tasks required students to apply concepts observe measure manipulate equipment and materials and record and interpret data Approximately 3 000 students participated in the 1991 mathematics and science assessments Scores varied widely from task to task and from country to country Relative performance of countries and provinces generally differed from those identified by written curriculum based tests A major lesson learned from the experimental test administration is that this form of performance assessment can be used reliably in international comparative studies although at an estimated cost three to four times greater than that for an equivalent number of written test questions Sample mathematics and science tasks are included and there is an appendix on problem solving in mathematics that describes outcomes produced by Scottish students

System for Light Airplanes Franklin F. Eckhart, G. Warren Hall, Paul A. Martino, 1966 The results of a flight evaluation of a Stability Augmentation System SAS for light airplanes are reported and discussed Twenty six non instrument rated private and commercial pilots whose distribution by rating and flight hours was typical of those who are involved in IFR disorientation accidents and five instrument rated commercial pilots were flown Quantitative measures of the bank angle airspeed altitude and heading were recorded during a series of planned VFR and IFR tasks with the SAS ON and OFF Qualitative data were obtained from the subject pilots by questionnaire and the recorded observations of the safety pilot A statistical analysis was made of the differences in pilot performance during system ON and system OFF operation It was shown that the stabilizing effects of SAS although not sufficient in itself to prevent this type of accident significantly improved the non instrument rated pilot s ability to maintain control of the airplane during an inadvertent encounter with IFR conditions Author
